

## PAFnow strongly supports internal auditors to prepare for audits effectively and perform audits efficiently.

### PAFnow is embedded in Microsoft Power BI:

Companies can use state of the art Process Mining in combination with the world leading BI tool Microsoft Power BI.

### PAFnow is a complementary software solution to existing audit tools:

Users can leverage more than 200 source connectors to get all the relevant data inside PAFnow and the insights to the right people in the company.

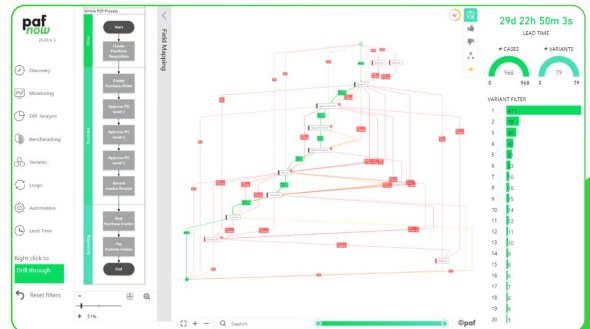

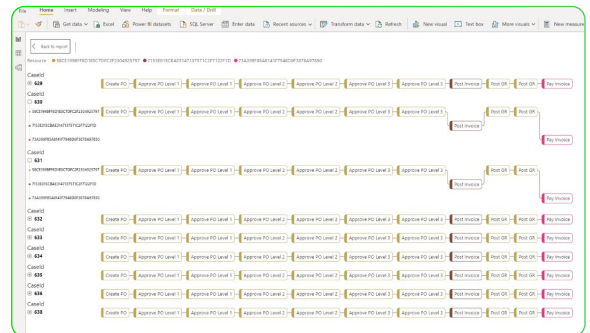

**The PAFnow AUDIT Edition eliminates the question of hit-or-miss from the audit process - it's a bull's-eye on identifying risks and unusual behavior every time:**

**Analysis:** Fast, objective, data-based insights into as-is business processes. Visualization of all process variants and deep analysis to find process exceptions, unusual transactions, bottlenecks, deviations, weaknesses, and potential risks.

**Compliance:** Compliance analysis for immediate detection of violations and deviations that would remain hidden using traditional methods

**Root Causes:** The PAFnow Root Cause Analyzer finds the causes behind process problems and tracks them down to the individual case level.

**Monitor:** Measure the process performance, monitor the progress and success of improvement measures.

### ↑ HIT RATES

Find and pin-point compliance violations and improvement potentials with bulls-eye precision

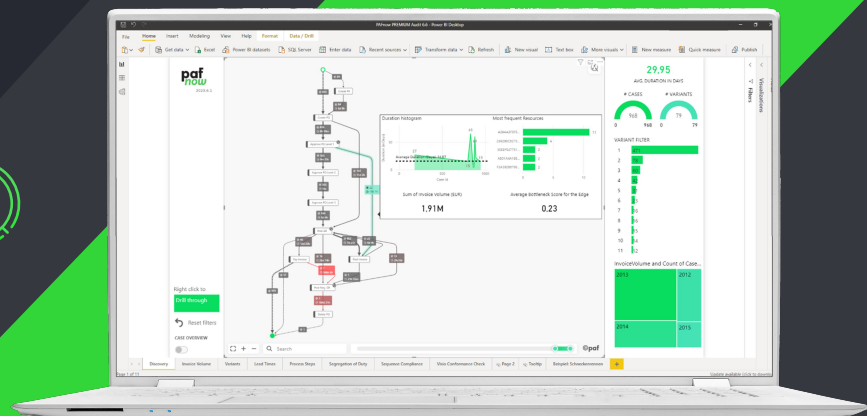

### ↓ TIME

Eliminate weeks of time and labor intense exploration

### ↓ EFFORT

Reduces Audit efforts by more than 25 %
