

AGENDA

DAY 1: ENGAGEMENT PLANNING & KICK OFF CALL

- ★ Kick off call to discuss the scope, brief overview of current processes, and ideal state.
- Discuss agenda for the exercise by charting out the scope of work (use case).

Day 2: Assessment & Collecting Data

★ This step involves us to deep dive into the customer's current data processes, and collect representative data.

Days 3 & 4: Data Modeling, Shaping, & Exploration

★ This step involves building the data model, performing necessary transformations and then performing data exploration to identify what insights could be found from the data.

Days 5-7: Create Reports & Dashboards

★ This step involves creating compelling dashboards, interactive reports with stunning visuals for the use case identified.

Days 8 & 9: Final Review

★ This step involves internal review with the customer and accommodating last minute updates for the dashboard.

Day 10: Final Demo

★ The pilot/prototype is showcased to the customer. Also, a target solution architecture is proposed for their future business analytics needs based on the assessment done during this PoC.

Power Bl (2 weeks Proof of Concept)

Our Business Analytics expoerts will implement a PoC where they will take a use case and relevant data and take it all the way to a compelling dashboard/report that provides actionable insights.

CORE LESSONS

By the end of the Power BI PoC the client will be able to get an instant handle on Power BI capabilities and be able to thoroughly analyze, experiment and iterate utilizing their data sets to drive enhanced business decisions.
