# Azure CI/CD Accelerator for Magento.

**Run Magento in Kubernetes cluster on Azure. Get off the shelf cost-effective and scalable Magento CI/CD setup for fully managed cloud services.**

— Deploys Magento application components to the cloud managed services

— Native Azure Kubernetes orchestration using AKS

— Provisions ready to use CI/CD pipelines for development, test and production environments in Kubernetes cluster

## Azure CI/CD Accelerator will bring you:

### Magento on managed cloud services

With Azure CI/CD accelerator, you empower cloud managed services providing high cost-effective use of computing resources, security and operation of the application 24/7. Moreover, you get the option of fine-grained application performance tuning through service level management.

### Kubernetes for scalability and high availability

Azure CI/CD accelerator deploys Magento into Azure AKS managed Kubernetes cluster for highly-efficient horizontal workload scalability and automatic load balancing in order to respond to outages, peak or incidental traffic.

### CI/CD setup

Minimise the build costs and detect defects early in the software lifecycle. Your teams would effectively be able to execute daily development tasks and release software builds at any time.

### Reduced delivery time by up to 2 months

With Azure CI/CD accelerator, you don't need to waste your time and money for tedious and error-prone configuring and tuning of CI/CD in the cloud. Instead, you get tested and proven setup from the first day of the project.
