LEGACY-2-CLOUD NATIVE
WITH AZURE KUBERNETES SERVICE
APPLICATION MIGRATION ASSESSMENT

WHAT TO EXPECT

MILL5 will help you hit the ground running with an assessment of your current legacy application migration needs. Our experienced cloud-native engineers will evaluate your current workflows and workloads, as well as develop a strategic plan for overcoming challenges and successfully building a path forward for a production-grade cloud native application implementation in your organization.

MILL5 has successfully engaged in helping customers move large-scale production deployments in a streamlined and cost-efficient manner using **Microsoft's** _Azure Kubernetes Service_. We focus on building a customized road map that incorporates the right migration strategy while mitigating inherent risk.

Identify
- ✓ Virtual meeting to understand current business challenges and state of application(s), to include current and future state needs

Define
- ✓ The scope and deliverables that are needed while creating a project timeline and resources required to successfully complete the assessment

Assess
- ✓ Identify the application(s) that need to be modernized
- ✓ Collaborate with in-house teams to collect data about the identified application, asses the current state and define the desired state in detail.

Roadmap
- ✓ Present application modernization roadmap with specific action items, technology stack requirements, and projected timelines
- ✓ Finalize the migration strategy and showcase how AKS can be optimized to reap the cost and security benefits.

A POWERHOUSE IN BRIDGING BUSINESS WITH MODERNIZED APPLICATIONS, AI AND IOT
