CYBER RISK
SOLUTIONS**
PRESENTS: **A CRISALIS
WORKSHOP**

We'll
be
seeing
you

 **Milliman**

UNDERSTANDING THE PROBLEM IS HALF OF THE SOLUTION

CRisALIS is a POWERFUL breakthrough solution that is unmatched in the industry!

This powerful workshop provides an overall view of the cyber risk landscape of a customer. In the workshop, you will learn the following:

- Identify blind spots by identifying hidden 3rd order dependencies
- Validate assessments and identify overlooked vulnerabilities
- Understand a more dynamic way to assess controls and how to map the cyber landscape of your organization
- Gain a deeper understanding of the non-linear relationships of controls and policies and how to identify key drivers to exposure
- Discuss why frequency severity models fail, and how to potentially predict future events
- Demonstrate how to quantify your risk appetite

How much time does the workshop require?

The workshop only requires five (5) hours of time from your stakeholders over approximately a four (4) week period. The workshop is broken up as follows:

Workshop	-	2 hours
Validation session	-	90 minutes
Readout	-	90 minutes

Who will architect the solution?

Typically a CRisALIS team is designed to work closely with the customer to help the business with the data exercise, coach them through the data aggregation process, guide them to new insights, calibrate and validate the output of the model and finally to provide a concise readout with analysis.

Here is an example of what the CRisALIS “Tiger” Team structure could look like:

- Principal (Peer Review)
- Managing Director
- Executive Risk Consultant
- Subject Matter Advisor
- Consulting Actuary
- Actuarial Analyst

Who attends the workshop?

This is a highly customized, business specific workshop. We recommend a minimum of five (5) core members of your business. Example: Members representing your C-suite, Risk, IT, Finance, Operations, Compliance, etc.

Who do you contact?
