

# CLOUD MIGRATION PLANNING

# What is the goal of a Cloud Migration plan?

## **Accelerate Innovation**

We help you plan for a faster migration to keep your innovation plans on track and keep your IT resources focused on the business strategy.

## **Mitigate Business and Tech Risk**

We identify and mitigate security, data governance, operational, technical, or financial risks as part of your plan to migrate to the cloud.

## **Provide Expertise and Experience**

We provide experts with experience in planning migrations and using the tools and the software platforms to conduct a thorough discovery and a complete plan.

# Typical Customer Challenges

## Lack of Expertise

Finding or training staff to conduct a migration is hard, costly and risky. We have the experts and tools to keep your migrations moving.

## Long Migrations

Unless you have planned many migrations it is hard to know where to begin and what path to take. Our migration planning will keep your migration moving and in scope.

## Higher Risk

Cloud migrations should not be a science project for your business. Done right it will be a powerful driver for innovation, but an improperly planned migration will put your business at risk..

## Inadequate Security Planning

Security starts before you move your first app to the cloud. It needs to be a primary consideration in the migration planning cycle.

## Lack of Automation

Cloud not only changes the way your IT runs, it can change the way you run your IT. Properly planned migrations will prepare your IT operations for more automation and less manual tasks.

## High Occurrence of Migration Issues

Unplanned migration issues stop teams in their tracks and increase migration timeline and can cost your business money. A migration plan that keeps the business moving while the migration occurs is the goal.

# Migration Planning Methodology

## Holistic business first approach

Moving to the cloud has to make sense for your business plans and strategy. We incorporate your business strategy into your migration plans so you understand the performance, organizational and financial impacts of the change and can maximize your investment in the cloud.

## Proven Methodology performed by experts

Our process has been proven over time across all customer types and sizes. We use tools and interviews to collect data and experienced experts to interpret it. Our plans will provide you with a detailed roadmap on how to move to the cloud swiftly and safely.

## Migration Planning Software Platform

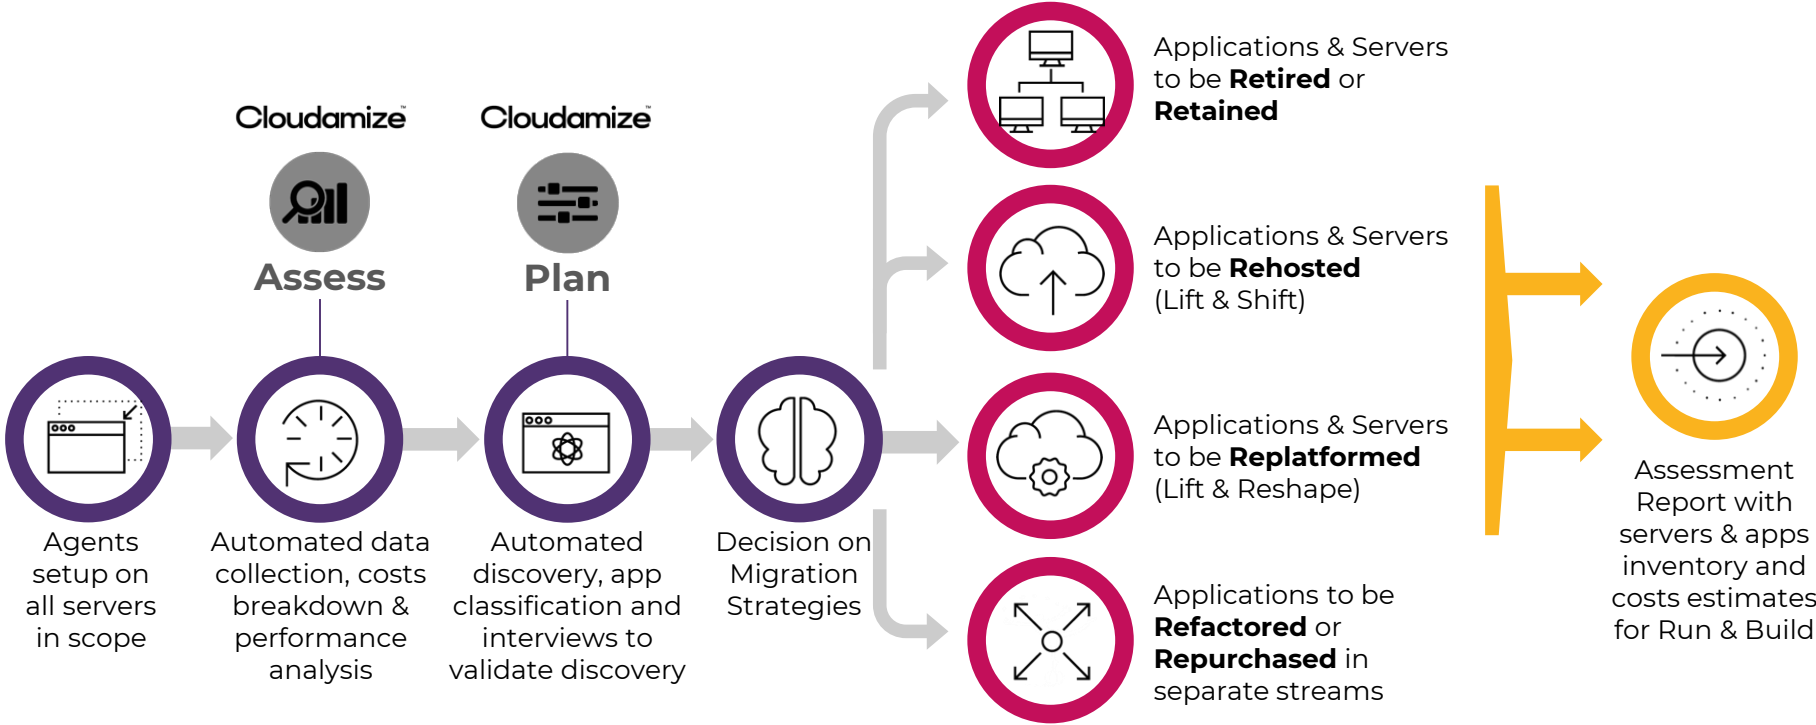

Cloudreach uses Cloudamize to assess and help plan the cloud migration.

Cloudamize is leading platform for workload analysis and migration planning.

The platform is owned by Cloudreach and is aligned strategically to our migration methodologies.

# Overview of Migration Planning

Assess the application portfolio to give migration strategies and costs estimates

# Data Collection

Our team will work with you to deploy Cloudfamize to measure existing physical, virtual, and cloud infrastructures so we can understand the current application workloads and their performance profiles, to accurately identify the optimal cloud configuration and pricing plan.

We supplement the Cloudfamize data with detailed stakeholder interviews to get a 360 view of the environment.

# 2.

## Review the data and make recommendations

After the onsite, our experienced cloud team will go back and review all of the information collected off-site.

The team will then develop a set of recommendations and roadmap for a migration plan based on based on our experience conducting many successful enterprise migration.

# 3.

Once we have developed our recommendations we will align those to a business case and ROI for investing in the recommendations.

Our team will present the recommendations to you and your leadership.

## Recommendations Presentation

# Outcomes

## Strategic Vision and Actionable Roadmap

# A

Our recommendations include long running goals and objectives that help align the actionable roadmap to the overarching corporate strategy.

## A Full and Detailed Migration Plan

# B

We analyse every application and make a recommendation for how and when it should be moved to the cloud complete with run books and project planning.

## Business Case and Cost Analysis

# C

Our recommendations are backed by the outcomes, ROI and cost analysis of moving to the cloud that the recommendation will drive. This helps build a case for the business to align and invest.

# Thank You!
