

# THE OPSGILITY Difference

Guided Digital Skills Transformation

*"When we hired Opsgility we wanted to shorten the technical barriers to provide better support and train our engineers in order to improve their technical knowledge. The training materials and instructors from Opsgility are high quality. We were very satisfied with Opsgility and would recommend them."*

- Carlos R. Amador  
Herbalife Nutrition

Digital transformation is so much more than just an "IT initiative". It effects your entire organization from the top down. Opsgility is a world leader in helping organizations digitally re-skill their work forces, from their IT departments and beyond. Let us help your organization and your people embrace and succeed in the modern age of the cloud.

## Executive Guidance

Transforming to the cloud with Microsoft Azure is the goal. Reskilling your staff to be successful with the new technologies will make the transformation faster and with a much higher chance of success. Our team of experts will help guide your leadership and learning teams to create a detailed learning plan tailored to your organizational learning goals.

## Proprietary Training Curriculum

We provide a large library of proprietary training material designed for organizations of all types using the tools and operating systems you will use in production. Our focus is staying on top of technology with consistently updated courseware and continuously tested hands-on labs. Our courseware can be customized to fit your needs, from beginner to advanced.

## Live Lab Environments

We are strong believers in hands-on learning. Our live lab environments give our students access to live technology without having to build their own test environment. Our labs give students a real world feel for the technology that they'll be working with every day. These labs are tested weekly to ensure the most reliable lab experience and are rated the highest from our students. Access to our live lab environments is available both through our instructor-led classes and SkillMeUp.com.

## Expert Instructors

Technical training can be challenging due to the complexity and busy nature of the modern workplace. Opsgility Certified Trainers are selected for the technical expertise as well as their ability to drive the training class. Keeping students attentions, having the ability to pivot to different topics based on the attendees in the room are all critical skills to ensuring a training class is successful.

Don't forget to try out our live lab environments with [SkillMeUp.com](https://www.skillmeup.com)!
