

## OpenText Content Server Power Automate Connector by One Fox

Power your content workflows by connecting Microsoft Power Automate and 300+ business applications to OpenText Content Server

**300+**

Integrate with over 300 business applications

**2X faster**

Create content workflows twice as fast with ready-to-go templates

**50%**

Increase productivity by 50% by user-centric workflow automation

**0**

Zero code approach requires no technical expertise or IT-involvement

An increasing information sprawl is limiting task and workload automation while hurting productivity and digital transformation goals. The OpenText Content Server Power Automate Connector allows you to streamline content processes across a widespread application landscape and limit information silos.

OpenText Content Server Power Automate Connector provides critical connection between business processes, enterprise content management and end user needs. The no-code approach of Microsoft Power Automate enables users to quickly automate their tasks and content workflows. Exchanging documents, metadata and events between OpenText Content Server and important business application.

The Power Automate Connector empowers your Content Server as the primary repository for all things content related. Integrating with business applications from SAP, Salesforce, Oracle, Adobe, DocuSign, Box, Google, Dropbox and many more. While maximizing investments in

your Microsoft cloud solutions and the OpenText platform.

### Bridge the information gap

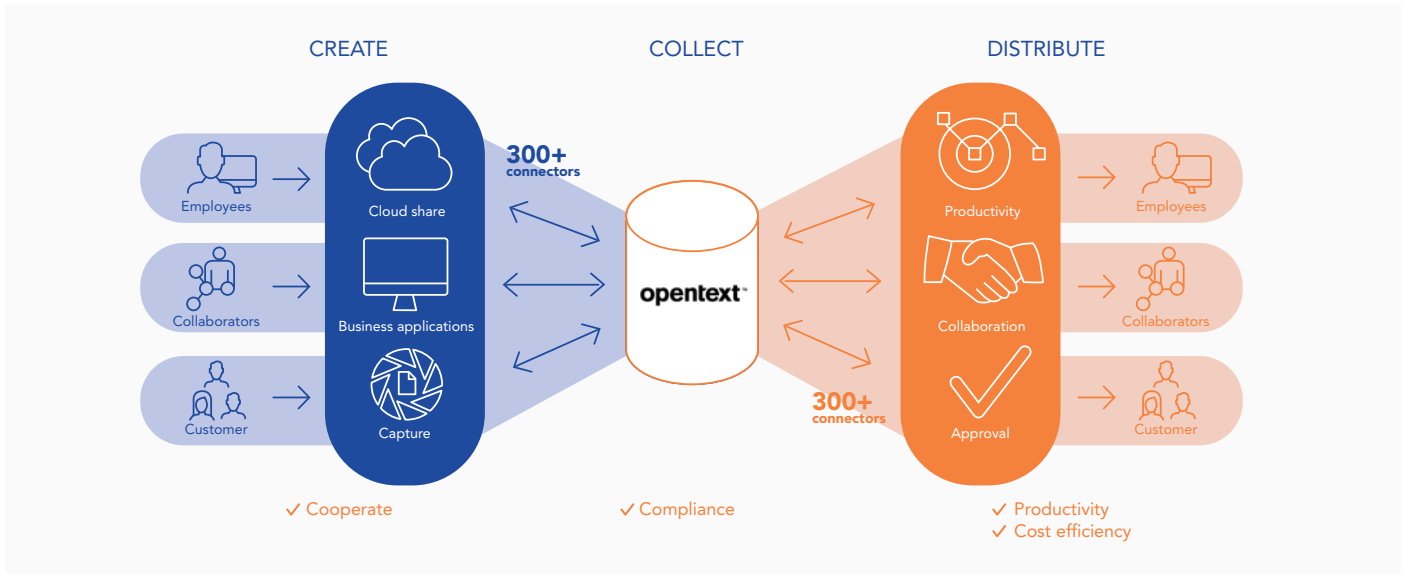

Integrate Content Server to over 300 business applications through the Power Automate Connector. So you can store and archive all enterprise content in your central ECM solution. Closing the gap between widespread application landscape and information silos.

### Workflow Automation

Automate extensive content workflows, manual and repetitive tasks with out-of-the-box workflows. Powering your productivity while streamlining primary and low level business processes. Lessening the pressure of your workloads and saving time in the process.

### User Centric

The zero code approach to workflow creation allows your users to automate their content flows in just a few clicks. All without the need for technical or extensive workflow expertise. Relieving necessary pressure of your IT department and expensive external hires.

## Streamlining ECM

The Power Automate Connector allows you to capture and exchange documents, metadata and events from any content repository into a single ECM-platform: Content Server. Capturing all important business content in one place for necessary compliance and controlled distribution.

Automating content distribution will improve productivity, increase your grip on unstructured processes and free up your employees from repetitive tasks. Leading up to a more cost efficient way of working. The Content Server Power Automate will even help you speed this up by providing several solution accelerators that allow you to instantly create workflows out-of-the-box.

## Accelerate workflow creation

Content Server Power Automate Connector provides several quick-start workflow templates. These pre-built workflows allow you to create workflows twice as fast, while supporting important content processes like:

### Shares & Compliance

Streamline content from cloud shares and content repositories like Dropbox, OneDrive, SharePoint, Box and many more directly to Content Server for centralized archiving while improving compliance.

### Approval Process

Setting up approval processes has never been easier. Thanks to easy integration between Content Server and a wide array

of email, notification and task management solutions.

### Digital Signing

Send your documents from Content Server to one or several people for easy document signing. Using popular signing solutions like DocuSign, Adobe Sign and Core Signature.

Find these and many more templates for workflow acceleration in the Microsoft Power Automate store.

SOLUTION FEATURES	BENEFITS
Power Automate Connector	Improves process productivity by connecting OpenText ECM with 500+ business applications to bridge silos and enhance content flows
Workflow templates	Accelerates the creation of content workflows and support of primary business processes
Content Server	Provides the foundation for enterprise-strength ECM, including records management and archiving
Records Management & Archiving	Extends records management and archiving capabilities of ECM to over 500 business applications and all accompanied content workflows
Content Task Automation	Increases productivity by automating content centric workflows and streamlining content across silos
Microsoft Power Platform	Provides the foundation for OpenText Content Workflows and allows users to create their own workflows without technical expertise
