

Ensure Application Availability with Azure Site Recovery (ASR)

As more and more organizations depend on technology to power their businesses, it is critical to have a robust Business Continuity and Disaster Recovery (BCDR) solution that is designed to effectively respond to downtime events: planned or unplanned. Microsoft [Azure Site Recovery \(ASR\)](#) is a robust BCDR solution that enables customers to respond to downtime, whether it impacts only a few applications or your entire data center. ASR supports applications in Azure and on-premises, providing comprehensive coverage across Linux, Windows, VMware and Hyper-V virtual machines, and physical servers.

BENEFITS OF USING ASR:

Simple, Automated Protection. Protect your environment by automating the replication of the VMs based on the policies you set & control. Coordinate and manage the ongoing replication of data by integrating with existing technologies such as Hyper-V Replica, System Center & SQL Server.

Cost Effective Protection. ASR is low-cost alternative to traditional hosted or self-provisioned DR environments because the only ongoing costs are for storage required to support the application replicas and the desired retention of recovery points and the per machine per month service fee. There are no compute, network infrastructure, facility rental, or software licensing fees required during ongoing protection.

Easy to Use and Manage. The Azure ASR console provides a unified view on the replication status of all your different workloads and allows you to carry out maintenance tasks, such as tweaking recovery plans. ASR's rich automation and orchestration is provided through PowerShell and production-ready Azure Runbooks, which help in making the recovery process consistently accurate and repeatable. ASR can carry out test failovers or planned failovers to test DR capabilities and planned outages.

Forsyte's Quick-Start ASR Offer:

Forsyte team of Azure engineers will work with your organization to configure and deploy the following quick-start ASR solution:

- Single Server Deployment - \$3,000
- Five (5) Server Deployment - \$5,000
- Ten (10) Server Deployment - \$7,000

Assumptions:

- Includes professional services only.
- Includes network failover testing.
- All servers must be virtual.
- Does not include an Azure Subscription.
- Assumes you have an Azure Subscription in place that will support the required configuration.

Forsyte IT Solutions is a leading provider of Microsoft Cloud technology. Forsyte's team of senior level MCSEs and MCSDs have tackled hundreds of complex and challenging IT projects. At our core, Forsyte is a cloud-first solutions provider that enables clients to optimize their investments in Microsoft technology. As a Microsoft Gold Certified Partner, Forsyte provides expert, high quality, data management and governance solutions to medium and large organizations across multiple industries, including education, state and local government, and the commercial sector.
