

CLOUD ECONOMICS

Getting your move to the cloud right can save you money and make your organization more nimble and agile. Get it wrong and it has the potential to actually cost you a lot more money. Having the right economic model is imperative to getting return on your cloud investment.

Implementing cloud solutions unlocks agility and brings many business benefits, but without a proper strategy, costs can quickly get out of control. You need a governance plan and a set of tools to help you get the most out of Azure through analysis, planning and business case development.

New Signature's Cloud Economics helps your team define costs and potential benefits of a cloud-first model. In this engagement, we leverage Azure Migrate, our cloud expertise and discovery tooling to identify systems to migrate and estimate costs. The engagement results in a report showing the total economic impact of moving to Azure, as well as a prioritized roadmap for workloads to be moved.

INDEPENDENTLY VERIFIED

Third-Party financial analysts are commissioned to provide Independent verification and validation through assessment. This is required to eliminate bias but also to apply best practices when capturing all relevant data and supplementing gaps based on industry knowledge.

SPEED OF EXECUTION

Utilizing tooling, best practices and extensive industry knowledge, the business case is delivered in weeks rather the months. This overcomes the challenges of resource constraints often experienced if delivered internally.

FINANCIAL FORENSICS

Capture expenditure, revenue and benefits required to provide not only cash flow and profit and loss, but also Return on Investment, Net Present Value and Internal Rate of Return. These are all required by the board to pinpoint when the investment will generate financial return and business value.

DEEP DISCOVERY

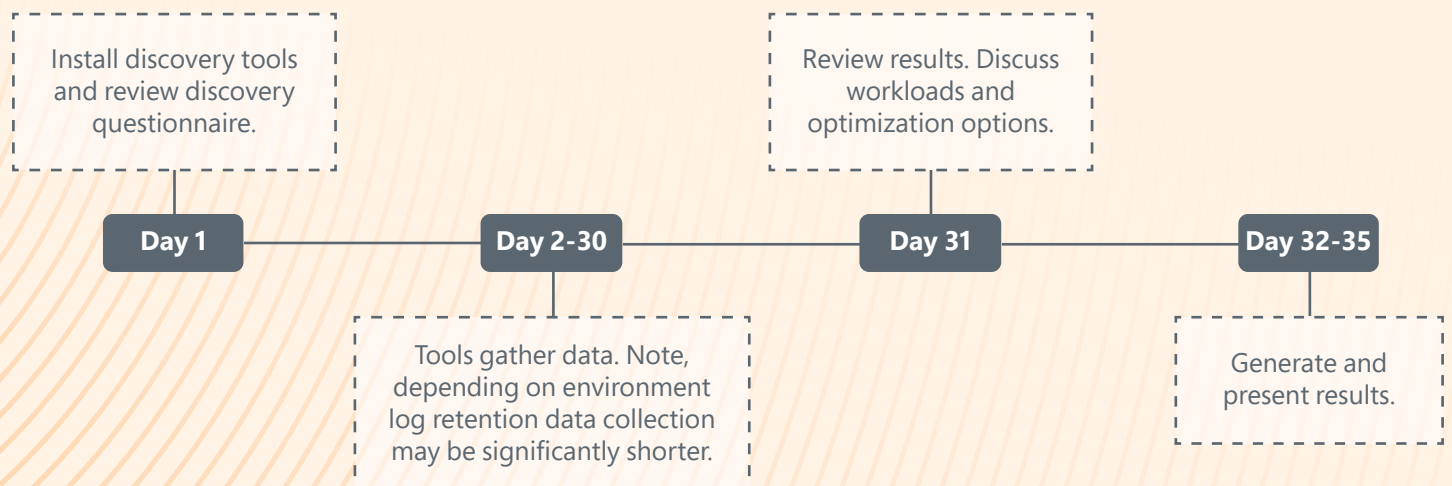

Deploying discovery tooling for lift & shift comparisons but also going beyond to provide a transformed target platform with migration and operational cost modelling included.

Our Discovery Process:

New Signature has developed a discovery checklist that guides you through the process of understanding your current estate, as well as a vision for your transformed future. This discovery includes:

- Tooling driven by Azure Migrate that assesses and defines key migration services and strategies
- A focus on benefits that support your unique business challenges and goals
- Performance-based right-sizing options that work to streamline your consumption based on usage
- Analysis of options such as Reserved Instances and Hybrid Use Benefit to save you money
- Execution strategies to align your business results with your goals and future state vision

Cloud Economics Engagement Timeline

Help your organization fully understand and maximize the ROI from your cloud investment.
