

Simplify the evolution of your business applications with the cloud from Microsoft.

Microsoft Azure cloud application development, Modernization of critical applications, SQL Migration, Managed service, Business continuity and DevOps coaching.

Who is Emyode?

Emyode provides businesses with Microsoft cloud application development and application management services, backed by our 24/7 support. Our teams become **virtual extensions** of your in-house teams because they are already optimized and used to working together. We are DevOps specialists with a track record of delivering new features in production every 3 weeks for critical applications used by customers.

Our approach enables our customers to:

- Handle rush projects without compromising their internal team’s day-to-day work
- Optimize their team’s DevOps process, if needed
- Ensure business continuity

We are able to do this in a cost-effective manner thanks to our **in-house tools** and our **exclusive approach**.

Why customers choose us

- To drive **MORE PROJECTS**
- To be more efficient and deliver projects **MORE RAPIDLY**
- To generate **MORE SAVINGS** (by optimizing the Azure cloud more efficiently)

3WeeksEvolution™

Our application development service provides you with a dedicated team who will deliver guaranteed business transformation based on a 3-week iterative approach.

Doberman™

Our premium application management service ensures business continuity for your custom applications, including maintenance and 24/7 support.

CloudDevX™

Our tactical coaching service is an innovative solution that will enable you to evolve your business applications more efficiently.

" Their technical expertise with Microsoft tools, their understanding of our complex business field, their professionalism and their ability to listen to our needs and quickly provide adaptive solutions has made Emyode the ideal partner to ensure the success of our projects. "

- Senior Application Architect – Direct Sales, Bell Canada

It's All About Integration

Our area of expertise is business application design, development, and modernization. But in order to resolve customers' issues, we believe it is essential to fully understand and integrate the three pillars of operational excellence:

For everything to run smoothly, all of these are required.

Our understanding of all three pillars helps make the application evolution process efficient and cost-effective. It enables us to deliver projects more rapidly, resolve customers' issues and fully support their DevOps and Azure cloud initiatives.

Microsoft Azure

- Development and deployment of business applications in Azure PaaS – Azure consumption included.
- Reliability and robustness via multiple international data centers, ensuring 100% uptime availability.

Doberman Managed Service

- Enables you to retain control over the rapid evolution of your business applications despite the exponential increase in technological complexity.
- Can easily be integrated into your existing tools in order to centralize all key elements of application management, from proactive monitoring to Azure consumption costs.
- Gives access to expert support and automated documentation of Azure subscriptions.
- Offered with all our service agreements.

On July 9, 2019 all support for SQL 2008 is coming to an end.

Emyode offers THREE Migration Assessment options

PHASE 1 –

Migration Workshop & Demo
(1 day)

PHASE 2 –

Migration Assessment
(1 to 5 days)

PHASE 3 –

Database Migration with a real
scenario (PoC)
(1 to 5 days)

Why Emyode?

Based in Montreal, Emyode has specialized in design, development and deployment of business software solutions for 20 years. We offer our clients tailored business software services, consultation services and coaching on modern IT management approaches and methodologies.

Our expertise encompasses cloud application development, modernization of existing applications, database migration, managed services and application monitoring services with 24/7 technical support. We are DevOps specialists who have established a business methodology that guarantees delivery of new functionalities every 3 weeks for development projects.

Our solutions transform mission-critical applications without compromising business continuity during the evolution process. We also offer our clients tactical coaching in DevOps and Azure cloud initiatives.
