

# Microsoft Azure AI Fundamentals

## Exam AI-900 | 1 Day Workshop

### Audience Profile

The Azure AI Fundamentals course is designed for anyone interested in learning about the types of solution artificial intelligence (AI) makes possible, and the services on Microsoft Azure that you can use to create them. You don't need to have any experience of using Microsoft Azure before taking this course, but a basic level of familiarity with computer technology and the Internet is assumed. Some of the concepts covered in the course require a basic understanding of mathematics, such as the ability to interpret charts. The course includes hands-on activities that involve working with data and running code, so knowledge of fundamental programming principles will be helpful.

### Prerequisites

Familiarity with computers and using a web browser.

**Course Duration:** 1 Day

### Course Outline

#### Module 1: Introduction to AI

In this module, you'll learn about common uses of artificial intelligence (AI), and the different types of workload associated with AI. You'll then explore considerations and principles for responsible AI development.

##### Lessons

- Artificial Intelligence in Azure
- Responsible AI

After completing this module, students will be able to:

- Describe Artificial Intelligence workloads and considerations

#### Module 2: Machine Learning

Machine learning is the foundation of modern AI solutions. In this module, you'll learn about some fundamental machine learning concepts, and how to use the Azure Machine Learning service to create and publish machine learning models.

##### Lessons

- Introduction to Machine Learning
- Azure Machine Learning

After completing this module, students will be able to:

- Describe fundamental principles of machine learning on Azure

### **Module 3: Computer Vision**

Computer vision is the area of AI that deals with understanding the world visually, through images, video files, and cameras. In this module, you'll explore multiple computer vision techniques and services.

#### Lessons

- Computer Vision Concepts
- Computer Vision in Azure

After completing this module, students will be able to:

- Describe features of computer vision workloads on Azure

### **Module 4: Natural Language Processing**

This module describes scenarios for AI solutions that can process written and spoken language. You'll learn about Azure services that can be used to build solutions that analyze text, recognize and synthesize speech, translate between languages, and interpret commands.

After completing this module, students will be able to:

- Describe features of Natural Language Processing (NLP) workloads on Azure

### **Module 5: Conversational AI**

Conversational AI enables users to engage in a dialog with an AI agent, or \*bot\*, through communication channels such as email, webchat interfaces, social media, and others. This module describes some basic principles for working with bots and allows you to create a bot that can respond intelligently to user questions.

#### Lessons

- Conversational AI Concepts
- Conversational AI in Azure

After completing this module, students will be able to:

- Describe features of conversational AI workloads on Azure
