

Case Study

Business Problem

AAA of Washington was embarking on significant digital transformation with the Microsoft Cloud.

Recognizing that this shift would require their data be accessible in new ways, AAA reached an impasse with their existing premise-based security controls.

AAA needed to re-imagine security in a cloud-first world with a focus on identity and data vs merely defense at the perimeter.

Solution

AAA of Washington engaged CompuNet in a Security Gap Analysis targeted to their business goals.

CompuNet aligned AAA's existing Security controls with the CIS Top 20 and then strategically mapped them to Microsoft's Security solutions included within M365.

AAA was able to identify Microsoft security solutions like Defender ATP and Intune that they could migrate to immediately and others they could roadmap towards like O365 ATP.
