

Securing Azure & Office 365 Collaboration Platforms

NCC Group's contribution to a securer UK plc during the COVID-19 Pandemic

We know many organisations are currently struggling with an additional cyber security burden as a result of the enforced isolation of their workforces and with sickness and caring responsibilities within their security teams reducing capacity to secure new networks and tools.

NCC Group is here to support you with a cost-effective service to quickly and easily enable secure remote working environments for organisations of every size.

The immediate challenge of enforced remote working

To enable organisations to keep operating in the new environment there has been an unprecedented move to cloud based remote collaboration tools and agile approaches to working. This is reliant on cloud technology and remote connectivity outside the normal confines of the organisation..

Our Security Operations Centres (SOCs) and our Threat Intelligence Teams have identified that bad threat actors are actively seeking to exploit the new situation to gain a foothold in poorly configured systems to steal data and secure long term covert access.

The rapid move to cloud services and new tools is, unfortunately, likely to have introduced a significant number of security vulnerabilities into remote working infrastructures. This means employees are exposed to new security threats they may not be aware of. To support you quickly, within a matter of days, we can:

Assess for Vulnerabilities

We review your remote working Azure and Office 365 infrastructure configuration and applications for any technical security vulnerabilities.

This is a focused vulnerability review aimed to identify any weaknesses, threats and risks to your remote working environment. Vulnerabilities will have a standardised (CVSS) score assigned to them.

Review your Security Governance

Our Microsoft Security Certified consultants will assess the security governance controls of your Azure and Office 365 environments across the people, process and technology domains.

Depending on your environment, these assessments will be based on one or combination of frameworks including Cloud Security Alliance (CSA), or NCSC Cyber Security Framework.

Provide Findings & Recommendations

You will receive a report that provides you with actionable outcomes. The report will outline key security issues with your Azure and Office 365 infrastructure, an assessment of the risks. It will include prioritised recommendations with guidance to remediate any weaknesses on a 30/60/90 day plan.

We can also support you in your remediation efforts and activities.

Benefits

- Peace of mind, secure your Azure and Office 365 remote working environment
- Reduce and fix vulnerabilities
- Mitigate against current threats
- Prevent loss of data
- Support user awareness
- A solution to meet short term needs
- Fast, competitive, and cost-effective

A solution with you in mind

Our service is scalable to suit any sized organisation. It will help you quickly understand what you need to do to maintain operational resilience while ensuring a cost effective return on your investment which is particularly important during this crisis. The modular format enables us to provide a rapid solution so you'll improve your security quickly.

About NCC Group

NCC Group is a global expert in cyber security and risk mitigation, working with businesses to protect their brand, value and reputation against the ever-evolving threat landscape.

With our knowledge, experience and global footprint, we are best placed to help businesses identify, assess, mitigate & respond to the risks they face.

Securing cloud collaboration environments

Secure by design

- Analysis of your Azure and Office 365 environments configuration against industry standards and best practice
- Adaptive security baselining provides insights and analysis to ensure best fit for your business.
- Ultimately tuning Azure and Office 365 in line with your risk appetite

People and processes

- Our Microsoft Security Certified consultants are fully experienced in assessing, securing and managing Azure and Office 365.
- Combined holistic security capabilities assure the security of operational practices and processes

Technical resilience

- Our independent experts have gathered knowledge from thousands of Azure and Office 365 technical assessments
- An initial assessment will identify vulnerabilities that represent an exposure to an attacker, and then complete a thorough end user systems access control assessment

Data protection

- Widely respected 'Continuous Assessed Risk and Trust Assured' (CARTA) principles are applied to secure the integrity of your cloud information and identity protection controls
- Provides visibility that data protection controls are proportionally applied to support end-user agility to operate from anywhere and on any device, with trust and confidence.

Pricing

To support UK businesses to become secure in their remote working environment, we have purposefully made this offering competitive and convenient to scope. The service is time bound, based on your Office 365 headcount and the number of Azure tenants, starting at three days for £2,500 +vat. We can of course cater for more complex environments on demand.

Secure your cloud collaboration now

To give yourself peace of mind within the space of just a few days, call now on 0161 209 5111 to speak with one of our Microsoft Security Certified experts – we're here to help.
