Azure Consultation Package: Technical Design Review
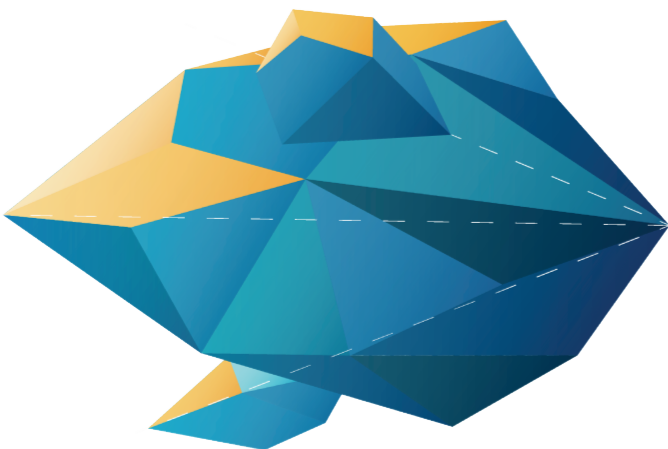

Who's it for?

This package is ideal for businesses already using Azure at scale or will be imminently and want to have their design critiqued by an expert.

The package in a nutshell...

Make sure you get the most out of Azure. Work with an expert to identify optimisation opportunities and conduct a risk assessment on the design. Ideal for those with some in-house expertise but don't want to get it wrong.

What will my business get from this?

A detailed review and recommendation report alongside a face to face feedback session that shares best practice.

What's included?

Stage 1: A meeting of minds:

We will meet with your technical architects to agree the scope of the project, share best practices and ask you to present your technical design.

Stage 2: Review:

Following any updates from our first day we will conduct an offsite review and diagnosis of your technical design.

Stage 3: Optimise:

We will provide feedback on the technical design including opportunities for further optimisation and possible risks.
