

cloud done right.

Cloud projects have many moving parts and a lot needs to be considered when designing one's future cloud environment.

With extensive experience on all three major cloud providers and a Microsoft MVP for Microsoft Azure on staff - XIRUS is in the best position to help you make your project a success.

For us, **Security** in the cloud is not an afterthought, we build it into our designs so that you can be comfortable hosting your workloads on the **Microsoft Azure** or **Google** cloud.

CLOUD MIGRATION

Contemporary **Lift & Shift** is our bread and butter. Those pesky applications that just cannot be made cloud native, we will help make them cloud aware with a mild transformation that utilises cloud capabilities around security, governance, automation and cost control.

With proven DevOps and SRE principles we will make sure that you are always in control of your cloud environment, and not the other way around.

MICROSERVICES & CONTAINERISATION

You are building a new application or product and are thinking about utilising a microservices architecture?

Or are you currently running a monolith and want to know how to redesign it in a microservices architecture?

Is it containers you are thinking of?

We have successfully helped customers solve the hard problems going down this transformative path.

TRAINING

Our training is based on official vendor syllabi but enhanced by real life experience of working in all three major cloud platforms for years.

From "Cloud Foundations for Beginners" to "Microservices Deployments on Kubernetes", reach out to us and we will build the training that fits your use case best.

Get in touch via contact@xirus.com.au to discuss how we can make your cloud journey a smooth one.
