

We Provide Comprehensive, Digitized Health Systems for Entire Communities.

Are you a national health service, a sub-national or regional government, an insurer, hospital system or other entity tasked with providing a digitized, scalable, modern and sustainable health system to your population and providers?

We have built and implemented our digitized community health system on time and budget in various geographies and regions. Projects implemented successfully range from systems of 30,000 to over 1,000,000 patients.

In Canada, we provide digital health records to over 5.5 Million Canadians.

We can work with you to provide a world-class 'One Patient—One Chart', modern, efficient and sustainable health system for your:

- Providers
- Patients
- Administrative Staff
- Regulators
- Insurers

Imagine efficiently operating all of your facilities connected in real-time:

- Hospitals
- Public Health
- Community Medical Centers
- Medical Clinics & Stations
- Prison Based & Military Care
- Virtual Care & Telemedicine
- Research Hubs

Our unique Hybrid Cloud Architecture is fault tolerant, allowing for environments with inconsistent internet to be properly connected. Our granular understanding of how doctors, nurses and allied health professionals both work and interact with each other within health systems is second to none.
