Windows Virtual Desktop

Regardless of your device type (Windows, Mac, iOS, Android or any other device with an HTML5 web client) bring-your-own-device (BYOD) and remote connect to your enterprise experience with Windows Virtual Desktop. ITs can pick whatever Azure VM will meet their teams needs and leverage the Windows 10 multi-session advantage that only Azure offers. With Windows 10 multi-session, you can run multiple concurrent user interactive sessions easily with the same deployment for more cost efficiency.

Deploy Windows 10 or Windows Server desktops and apps

Publish full desktops or individual remote apps for as many host pools as you need using your own image or by choosing images from the Azure Marketplace.

Migrate your existing virtualized desktops and apps to Azure

Take advantage of the flexibility and scalability of Azure by migrating your existing Windows Server and Windows 10 or 7 images to the cloud.

Spend more time on desktops and apps and less time on infrastructure

Simplify management of your virtualized desktop and app environment by connecting your virtual machines to Windows Virtual Desktop.

Built-in intelligent security

Keep your applications and data secure and compliant with security capabilities that can proactively detect threats and take remedial action.

Deploy and scale in minutes

Simplify deployment and management of your infrastructure and quickly scale based on your business needs.

Contact Sela today to discuss and put into motion your WVD deployment and harness the power of cloud computing in your organization.
