

▣ Azure back-up and disaster recovery workshop

Workshop summary

We review your existing environment and back-up architecture solution, in order to provide a recommended approach for migrating to Azure Back-up Services and Azure Site Recovery.

Our approach

We are a Microsoft Gold Certified Cloud Platform Partner and an experienced Cloud Service Provider.

We work with your team to provide advice and support where needed and take time to understand your requirements, ensuring any recommendations fit well with overall business goals.

The output of the workshop session will offer a clear and practical plan to transform to a Microsoft Cloud based back-up and disaster recovery solution.

Our team will review your existing on-premise or cloud environments and make recommendations for a back-up and disaster recovery plan. They will highlight the areas in which Azure has built-in capability and offer advice on opportunities to strengthen the plans further.

What you get

1. A discovery session to understand your IT environment and what's important to your business:

- review target data locations and format
- review current recovery point and time objectives (RPO/RTO)

- understand data retention, legacy data recovery and security requirements
- understand the networking, storage and server architecture

Based on the above we will discuss options around back-up and DR methodologies, appropriate to the requirements discussed

2. A write-up of the workshop output which will also include:

- suggested final state architecture for back-up and disaster recovery leveraging Microsoft Cloud based solutions
- estimated cost of the services based on existing data sizing and retention requirements
- potential changes to the IT service operation (policy, process, procedure)
- recommended next steps

Timeline

2.5 days

- **1 Day onsite**
Workshop with your team
- **1 Day offsite**
Report writing
- **½ Day onsite**
Presentation of results
