

Anantara has developed a range of advanced capabilities in Analytics that are built around the company's proprietary framework and methodology for intelligent Analytics named Enterprise Management Systems (EMS)<sup>TM</sup>

EMS encompasses capabilities from simple Data Visualization to complex Analytics capabilities embedding Artificial Intelligence techniques which would work together with statistics-oriented Predictive Analytics techniques to produce powerful Prescriptive Analytics solutions. Such Prescriptive Analytics solutions, in combination with enterprise systems (including ERP), would empower business processes to achieve new levels of business performance. EMS would also exploit the power of Big Data, Internet of Things (IoT) and M2M communications

## Anantara Solutions Pvt. Ltd.
