**Built upon the largest source control host**

**You have a clear picture of your current DevOps maturity**

**You understand the process, tooling and cultural path forward**

**You can align business and development goals**

**You know resource and results expectations**

# Magenic's DevOps GitHub Accelerator can help you drive your development and delivery Fast Forward

## Magenic's DevOps Services have helped our clients ...

- Achieve a 98% reduction in regression testing time
- Achieve a 96% reduction in smoke testing time
- Deliver 12 times more releases

## Magenic used Azure DevOps to increase release frequency by 300 % and production release speed by 60%

- A global audit, consulting and financial advisory firm wanted to expand and improve an application that was a mission-critical tool for the organization
- The application didn't integrate with their new technologies, taking up to 48 hours to deploy, with numerous manual processes involved in build and release.
- Magenic helped migrate the application to Azure with Azure DevOps used to automate resource provisioning for more efficient deployment.
- Magenic setup Quality checkpoints to automate smoke tests post deployment.
- Releases with approval gates were setup on an agreed to cadence between development, test, UA and production.
- Database deployments were incorporated into the release process eliminating the need for a separate manual script run.
- Release automation frequency increased by 300% and speed of releases to production increased by over 60%.

## Magenic's DevOps GitHub Accelerator
