What is Secure Score?

Microsoft created the Secure Score report in order to help solve security management challenges in their products. An organization's Secure Score provides insights into your security position, and guidance to increase your security level.

Following the Security Score recommendations can protect your organization from threats. From a centralized dashboard in the Microsoft 365 security center, organizations can monitor and work on the security of their Microsoft 365 identities, data, apps, devices, and infrastructure.

Secure Score helps organizations:

- Report on the current state of the organization's security posture.
- Improve their security posture by providing discoverability, visibility, guidance, and control.
- Compare with benchmarks and establish key performance indicators (KPIs).

Organizations gain access to robust visualizations of metrics and trends, integration with other Microsoft products, score comparison with similar organizations, and much more. The score can also reflect when third-party solutions have addressed recommended actions.

Secure Score Assessment

Our team of Microsoft hybrid cloud experts will lead you through the process of identifying key elements to better secure your Azure and Office 365 environments and help ensure that your company's critical data is protected. We use Microsoft's Security Assessment program, which offers a set of clear, proven processes and recommendations.

While security provided by cloud vendors is by far the safest environment to use today for your business, each of the settings must be defined and evaluated regularly.

What Integration Partners provides

We use proven tools and processes for identifying the most critical controls that should be applied in environment. We rely on our years of experience in working with organizations of many sizes and industries to provide you with guidance in prioritizing and implementing those controls in phases, minimizing disruptions to your employees.

We provide an end-to-end approach that includes an organizational assessment, detailed review of the report and recommendations on next steps. Plus, we provide best practices on how to successfully implement Microsoft security features.
