

Secure your Azure Move

What's behind a Digital Transformation?

The journey to the Cloud can be a lovely travel as well as get caught by the devil. Sword can accompany customers to embrace this journey with the right approach, also help them to implement the correct gates to start from the beginning to the end, provides guidance and best practices.

Sword Azure migration framework

Sword Azure migration framework is a SaaS solution to jump into the Cloud, residing in Azure with a small footprint and without persistent agents. No Database (Data uploaded to the cloud) and use standard network protocols and ports. Available for multiplatform as Office365, Windows environment, Linux devices, vCenter Appliances.

Why customers use "Sword Secure your Azure Move"?

At-a-glance:

- Increase security by leveraging interoperability between different vendors.
- Cost management : optimize workloads to fit with the real consumption.
- Better user experience : give to customers a new way to install and use their devices but keep control on security and environment.

Increase security

- Simple to deploy and to manage
- Third party integration
- Driving Governance and Compliance

Cost reduction

- Reduce physical footprint
- Optimize licensing management
- Increase automation process

Improve user experience

- Give self-service deployment to users (Autopilot)
- Give unified and accessible workplace environment for all users (internals and externals)
- Simplify user devices management

Reduce TCO by consuming service instead of hardware

ROI improvement by building a full Cloud strategy

More productivity and user satisfaction

The challenge for a company like MCI is to always be at the forefront of technology because our customers expect us to provide services with the latest tools. MCI has chosen to provide its customers with the tools of the Microsoft solution, both on Microsoft Office 365 and on Microsoft Azure. These tools combined with the know-how of our teams allow MCI to increase its competitiveness and profitability by reselling value-added services.

Sword was a key partner in this support and allowed us to manage this migration to Microsoft Azure from A to Z by avoiding the usual pitfalls when we do not master this type of project.
