KEYHOLE CAPABILITIES

EXPERT CONSULTING

Keyhole Software is a Midwest-based software development and consulting firm. Keyhole employee consultants excel as "change agents," helping our clients to be successful & strategic with software technologies that bring competitive advantage.

TECHNOLOGY SPECIALIZATION

We frequently assist clients with custom application design, development, and modernization initiatives with .NET, Java, and JavaScript/SPA technologies.

FREE CLOUD READINESS ASSESSMENT

FOR AZURE DEV DAY ATTENDEES

To all attendees of Azure Dev Day 2018 Kansas City, we offer your company the rare opportunity of a free assessment with Keyhole Software modernization experts & architects.

WHY AN ASSESSMENT?

Organizations are growing past their current and legacy infrastructures at a rapid pace. Often the impetus is to immediately move "to the cloud" or "go to Microservices" and all the problems will be solved.

Unless your organization is truly ready to make that move, you will encounter several challenges that may impact success. The assessment topics must be reviewed before moving to Azure and the cloud.

ASSESSMENT DETAILS

This assessment is one to two hours in duration. You will be able to sit down for advanced Q&A with Keyhole Software experts to cover five topics of note: the current state of infrastructure, application code, data, DevOps, and team maturity. The assessment provides an unbiased view into your organization's modernization outlook with suggestions for best practice.

ASSESSMENT GOALS

These answers will help you determine your organization's cloud readiness, as well as begin to set the groundwork for a plan to get to the cloud. Once that is in place, prioritization and execution of the plan can help your organization make an educated modernization move to the cloud.

If you have any questions about the tactical "how," or the strategic "why," behind modernization, please reach out to us at Keyhole Software. We are modernization and microservices experts and can help make those cloud goals a reality with our team of experts and architects.
