

Datacenter Transformation using CLIP™ (Cloud Infrastructure Platform)

Increase your business agility and time to market by leveraging the power of Azure cloud

Enterprises planning to modernize their infrastructure find it difficult to reduce capital expenses and streamline operations while using on-premise solutions. Brillio leverages its proprietary cloud & infrastructure platform (CLIP™) to assess your environment and requirements. Brillio’s Migration strategy leverage MS Interoperability to redefine the developer landscape with shorter development cycles, reduced costs, and openness into core applications.

What is Brillio CLIP™

Brillio’s proven solution is bundled with cutting-edge tools that act as right catalysts, at various stages of migration and operation support, right from discovering current ecosystem to migration on Azure, testing and support. It facilitates enterprises to reap various benefits such as increased efficiency, performance and cost effectiveness.

Why customers use Brillio CLIP™

Brillio leverages its CLIP™ solutions bundle, which features advanced capabilities of operational intelligence and automation.

- Reduction in discovery effort by 30 percent by leveraging Brillio’s CLIP™ automated tool
- Reduce overall migration timeline by 28 percent
- Ability to instantly self-provision infrastructure

Increased Efficiency

- Streamline operations and provide an alternate hosting environment for applications, which reduces development and deployment cycles

Increased flexibility and performance

- Offers agile infrastructure provisioning, which is 200–300 times faster for development and testing when juxtaposed with traditional hosting environments.

Cost Effectiveness

- Enterprises migrating applications to MS Azure cloud gain 20-50 percent cost savings per user/month.

Improve business agility by 28 percent

Improve SAP performance by 30 percent

Up to 40% cost reduction

Heterogeneous migration of On-Premise workloads with multiple landscapes to Cloud environment

Landscape spread over 4 geolocations with each geo consisting of a 4-stage Regulated Application Deployments. Significant cost savings due to a configuration driven approach thereby reducing build, deploy and test cycles

Accelerated path for on-premise to MS Azure cloud migration

Accurate Readiness Assessment

- Comprehensive Discovery and Assessment approach totally mitigated feasibility evaluation risks
- Bilateral workload classification based on application category and complexity

Precise ROI Analysis

- Classify applications for Rehost / Replatform / Revise / Repurchase / Retire
- Precise computation of effort involved for migration across 5 categories

Optimized Cloud Spend

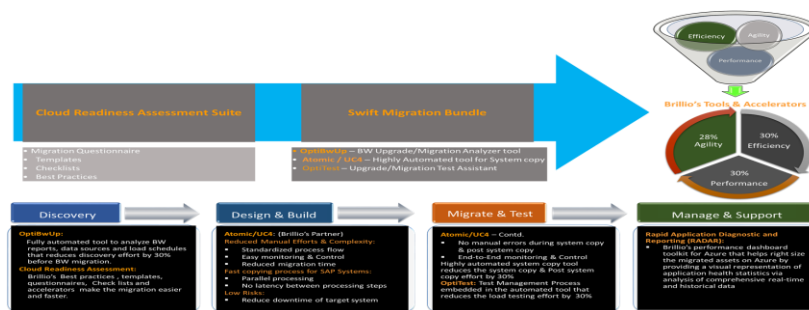

- Identifies the right scale for the right usage of infrastructure of the application
- Goal based financial modelling drives design of deployment architecture

Our promise to you

Brillio's CLIP™ ensures enterprises have a seamless, streamlined migration experience while moving on-premise workloads to MS Azure cloud landscape.

An offer to get you started

- Enables businesses to quickly deploy applications on the MS Azure cloud.
- Leverage Brillio's years of experience in handling Microsoft technologies to increase flexibility and reduction in power requirement
- Improve business agility, IT efficiencies, cost effectiveness.

Tangible Benefits / Desired Outcomes

- Reduce overall Total Cost of Ownership by more than 50%
- Improves business agility by more than 30%

Why Brillio?

Brillio follows a multi-pronged approach for on-premise to cloud migration, concurrently using CLIP™. It diligently integrates various tools and solutions along the migration path to increase business agility at lower cost while mitigating risks that arise during the migration journey.
