

Application Modernization Assessment

Seamlessly Migrate to Azure

Custom applications are a critical part of nearly every business's processes. However, many were built in a different era, before the advent of cloud technologies that make applications more efficient, provide a better experience for users, and provide far greater functionality than ever available before. In addition, moving applications into the cloud improves accessibility for remote users while increasing security and compliance.

Catapult can simplify the process of moving your applications to Azure and modernizing your technology landscape. **Catapult's Application Modernization Assessment** will help you develop a deep understanding of your company's current business-critical applications and how they could be modernized with Azure. Successful application modernization requires careful planning, as well as deep knowledge for how to architect for the cloud to take advantage of new innovations as they are introduced. Catapult has Advanced Specializations from Microsoft in both Application Modernization and Server Migration, making them the ideal partner to both assess your current environment and seamlessly migrate your application, whether this is your first step into the cloud, or a part of a well established strategy.

APPLICATION MODERNIZATION ASSESSMENT

Catapult will help create a migration strategy by conducting a variety of workshops to explore your applications and discuss current and future goals. We map your objectives, discover risks, and create a migration strategy that best fits your needs.

WHAT YOU GET:

Modernization/Migration plan and estimate

LENGTH:

Two-week assessment

BENEFITS & VALUE

- Get a clear vision of the modernization process
- Develop a strategy roadmap that takes all users needs into account
- Empower your team to scale applications quickly
- Keep up with the latest security and technology trends

DAY 1-2 ENVISION

Application Review Workshop

- Envision and define goals
- Review current state of each application.
- Investigate architecture, business drivers, integration points, and more.

DAY 3-4 ASSESS

Technical Review Workshop

- Assess details of application
- Create and design a plan for modernization

DAY 5-10 BUILD

Modernization Roadmap

- Build migration strategy
- Create timeline for modernization plan
- Define technology needed
- Define architecture for each application
- Deliver full modernization plan and estimate
