Energy Metrics harnesses information from all sources that influence an infrastructure's health.

Information is indexed, stored, and analyzed, so that users can query and visualise information, view historical trends, and predict future outcomes.

Infrastructure is awake, responsive and intelligible, enabling fully informed decision making to better manage and optimise cost.

Energy Metrics - Your eye in the sky for health, safety and savings

Quick and Easy

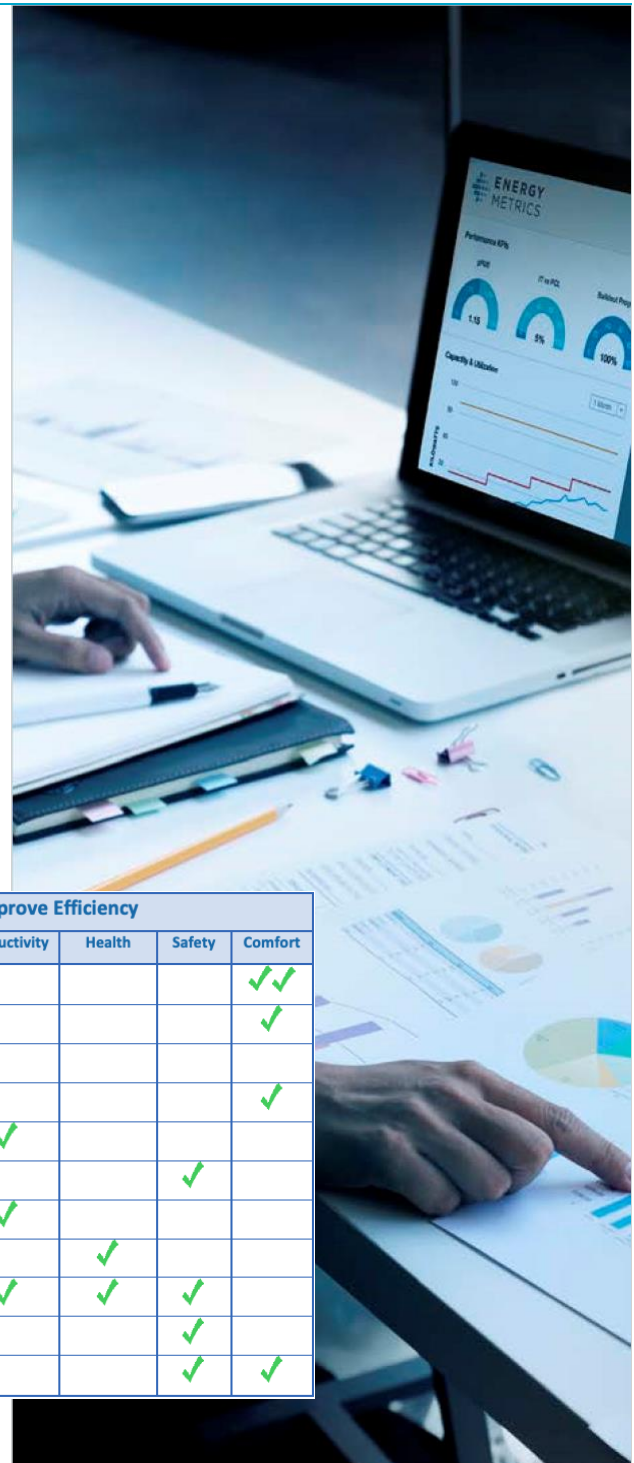

- Deploy a location in hours
- EM works with your existing Building Management Team to deliver
- Connect to your existing Systems – any BAS/BMS/EPMS
- Add any innovative IoT devices
- Intuitive, practically no training needed
- View and Coordinate all your portfolio locations centrally

Positive Business Impact

- Minimize Energy Consumption, Reduce Site Visits, Decrease Waste, and Lower Utility and Maintenance Bills
- Fault Detection optimizes maintenance and repair costs
- Increase lifespan of infrastructure - Reduces capital spending for replacements
- Lower overall cost of real estate management

Simple and Intuitive Platform

- Mobile device, tablet and computer Apps
- Role Based Access for stakeholders across an organization
- Portfolio, Building, and Infrastructure level views
- Real-time Monitoring, Benchmarking and Analytics
- Our Historian records everything including external weather
- No limits to Data Retention
- Full Sustainability and Finance Reports
- Fault Detection and Smart Notification
- Vendor & Device agnostic
