

OVERVIEW: Gain a quick and focused understanding of the benefits that the Microsoft Azure Cloud can bring to your organization. This 3-day engagement will provide you with the skills required to connect and manage your new Azure subscription and will allow you to map out a high-level plan of action for further developing your Microsoft Azure cloud services.

SCOPE OF SERVICE: As part of this engagement, we will work on site directly with your IT team to deliver the below services and guidance:

- Create and log into your new Azure tenant (payment information required)
- Provide a comprehensive overview of the Azure portal
- Examine the Identity and Access Management (IAM) functionality of the Azure Platform
- Create a virtual machine with access restricted to your corporate environment
- Examine cost management and alerting features
- Demonstrate the function of Azure Resource Management (ARM) template
- Introduce the Azure management tools suite (Storage Explorer, Azure CLI, PowerShell)

Additionally, we will work with you to plan your future service migrations to the Azure platform, including a discussion of the service options available for network connectivity between your datacenter and the Microsoft Azure cloud. Finally, we will provide a comprehensive 'next steps' document, detailing the conclusions of our discussion, and providing a recommended approach for the first stages of your migration to the Microsoft Azure cloud.
