

SCCM remotely manages operating systems, software distribution and network security. However, this tool lacks rich reporting and dashboards that provide insights into the things that matter the most to you. The SCCM Dashboard Solution Template offers intuitive visualizations that give you an on-demand snapshot of your environment wherever you are.

Within Power BI information is collected daily so you can see your organization's computing health and see how key metrics change over time. Quickly identify machines requiring critical software updates. Be notified of successful and failed mitigations to malware infections. All this from the interactive data visualization tools embedded within Power BI.

Marquam's three step solution deployment process for Power BI:

Would you like to see the deployment status of operating systems or identify machines with 3rd party license agreements? The SCCM Dashboard can help and we are here to help you.

Connect with Marquam to schedule deployment in your environment.
