Joelle Jobson

Intranet Guru
Business Analyst
IT Consultant for over 10 years

What We Do

On Demand Training

SharePoint, Power Apps, Power Automate, and Teams training courses that are available online anywhere in the world at any time

Process Automation

We'll work with you to automate your organization's business processes, utilizing forms and flows created with Power Apps and Power Automate
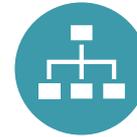

SharePoint Modernization

Navigating modern SharePoint features can be a tricky endeavor. We'll be your guide and help you architect a robust intranet and collaboration platform

SharePoint Migration

Moving your content to Office 365 is a daunting challenge. Our knowledge can greatly help with smoothing out this transition while helping make the most of Office 365

Leave InfoPath Behind

Stuck with old InfoPath forms that are being deprecated before your eyes? We'll help you transition to the modern solution, Power Apps and Power Automate

Mentoring and Support

It's in our name! We will talk through your ideas and help identify any unforeseen roadblocks. We can also support you through any technical hurdles you might encounter along the way. The level of help is up to you

Our Training Services

Includes the PowerApps knowledgebase, and step-by-step labs.

The missing piece to your SharePoint project

EXPERTISE

FLEXIBILITY

PARTNERSHIP

Combined, we have over 20 years of SharePoint expertise. We have spent years speaking and blogging in the Microsoft technology community
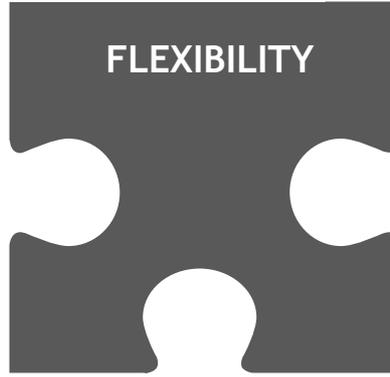

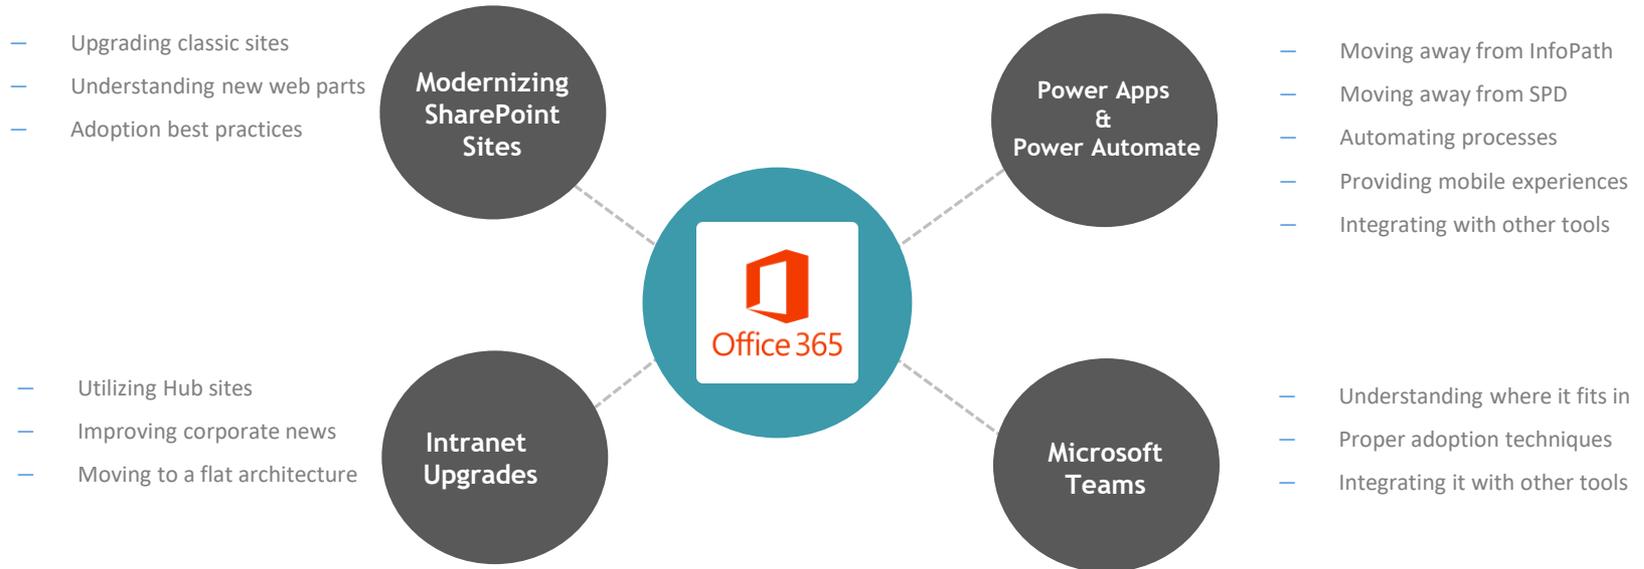

We know that priorities can change as fast as the technology, so we keep our billing process simple and flexible to support your needs at any given time

We love that so many of our customers are repeat customers. We always want you to feel like we are an extension of your team

A common question we hear is:

"Where do you find your customers needing the most support with Office 365?"

— Upgrading classic sites

— Understanding new web parts

— Adoption best practices

Modernizing SharePoint Sites

Power Apps & Power Automate

— Moving away from InfoPath

— Moving away from SPD

— Automating processes

— Providing mobile experiences

— Integrating with other tools

Office 365

— Utilizing Hub sites

— Improving corporate news

— Moving to a flat architecture

Intranet Upgrades

Microsoft Teams

— Understanding where it fits in

— Proper adoption techniques

— Integrating it with other tools

Logistics scheduling application for a retailer

Tool ordering, inventory audit app and business process automation for a construction company

Planned and built intranets for organizations that range from 30 employees to over 5,000

Management goals tracking application and intranet design for an engineering company

Automation of three business processes for a state government's Department of Labor

Change request application and automated business processes for a manufacturing company

Customized training videos and provided intranet migration and modernization support for a large pharmaceutical company

Employee incentives app, personnel change process automation, project approval process automation and intranet build & migration for a financial institution
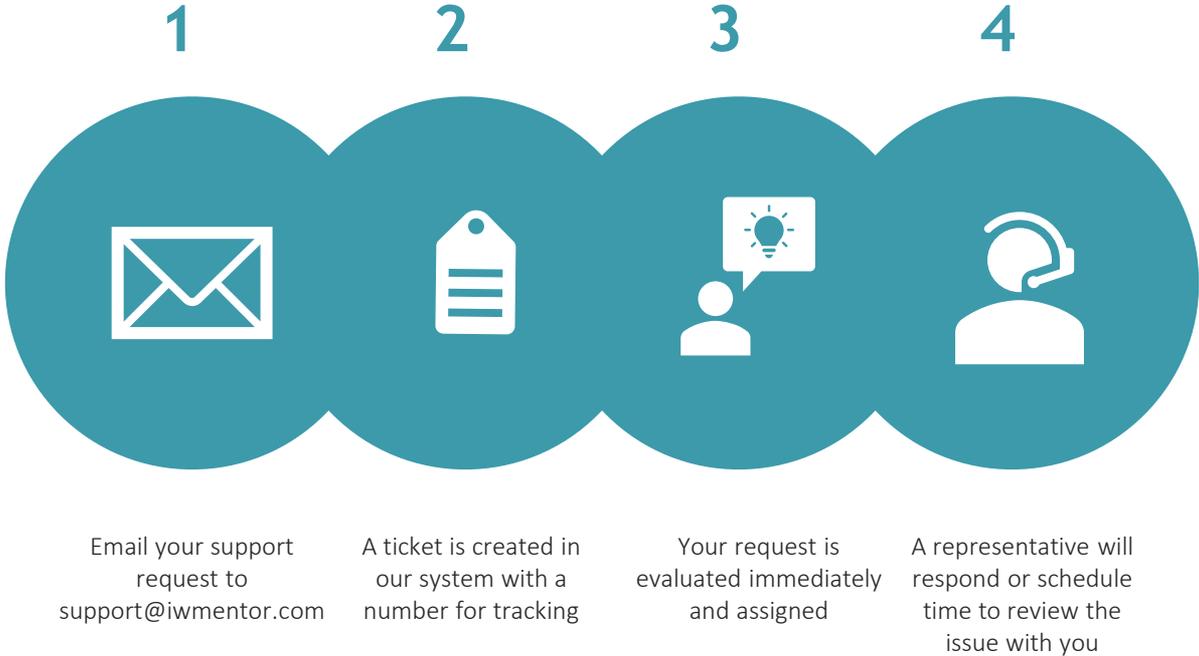

Business Solution Development Process

At IW Mentor, we pride ourselves on flexibility; however, we also know that business solution improvement projects require a process that can be tracked and easily understood by everyone involved. Below is the typical process we follow for our business solution improvement projects.

We have worked in both waterfall and agile development environments and have no problem adjusting our process to fit those as necessary

Requirements	Solution Architecture	Development	Testing	Launch
We gather requirements, establish the flow of your process and understand security factors	We test the overall concept of your process, plan the UI, determine database connections and plan outputs (i.e. email)	We develop the application in a separate development environment and check in regularly on our progress	We have three phases of testing, including development testing, QA testing and UAT	We support you through launching the application including any necessary training or documentation

Support Process

1   **2**   **3**   **4**

Email your support request to support@iwmentor.com

A ticket is created in our system with a number for tracking

Your request is evaluated immediately and assigned

A representative will respond or schedule time to review the issue with you

Delta Pipeline Inventory App
2018

Microsoft completed a case study on an inventory application we built for our customer Delta Pipeline. This tool was built utilizing technology in Office 365 including Power Apps and Power Automate
