

# Application Cloud Readiness Assessment

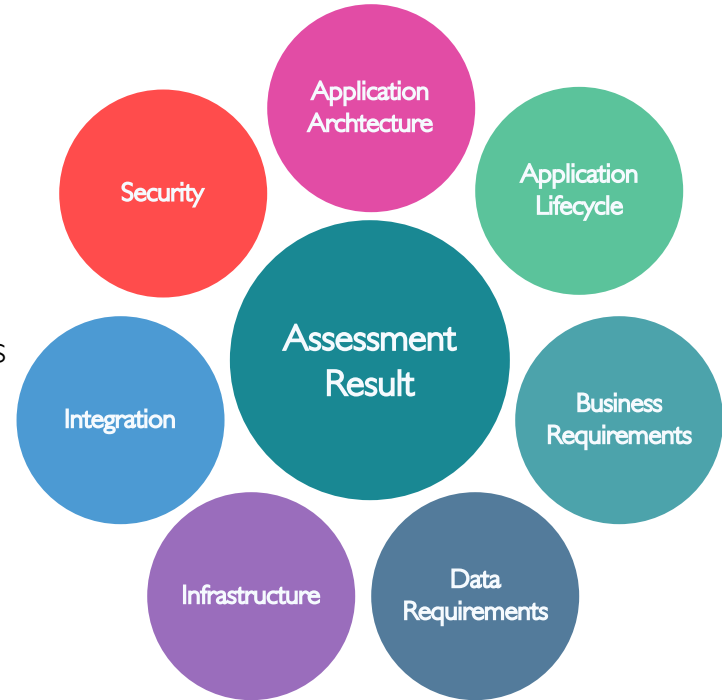

‘Determine your organizations path’s to public cloud’

# Application Cloud Readiness Assessment

*What does your application landscape consists of and to what extent is your application landscape ready to migrate to a (Public) Cloud environment?*

The online Application Cloud Ready Assessment answers this question.

Through the online Bauhaus Application Cloud Readiness Assessment and interviews with your Product Owners, IT architects and Application Managers, Bauhaus gives you insight into the extent to which the application landscape is suitable for landing in a Public Cloud environment. In addition, you gain insight into the life cycle of applications and the assessment provides a lever for rationalizing the application landscape by linking applications to processes.

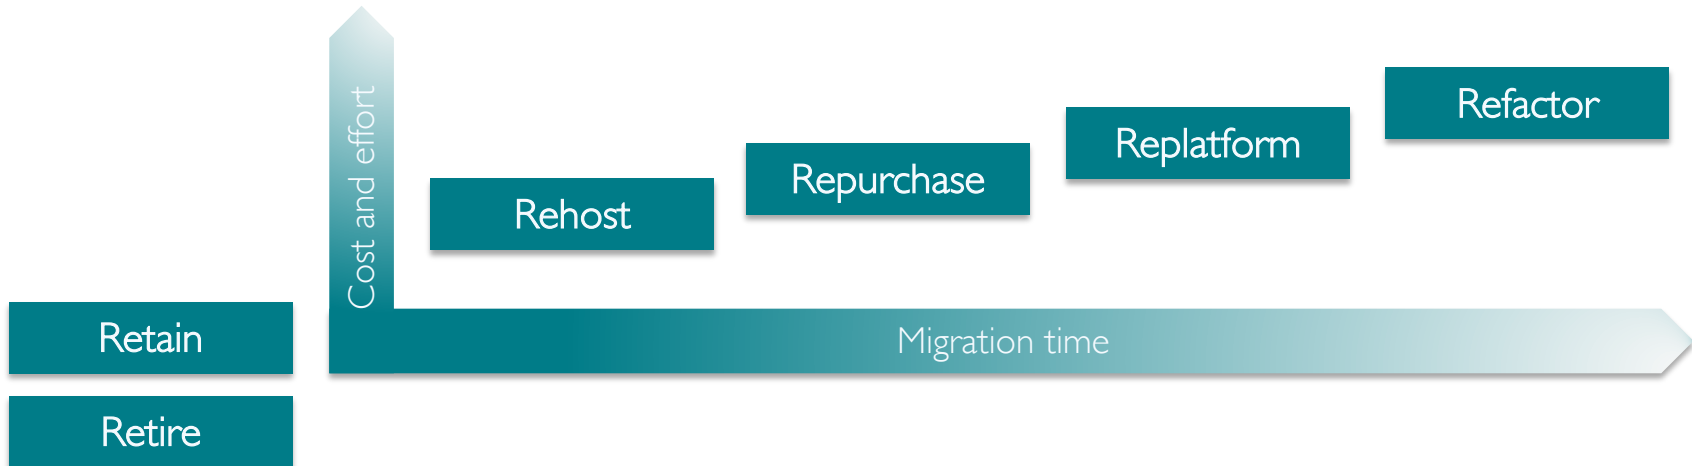

# Optimal migration roadmap

The migration of your application landscape can be done in different ways. To map the optimal path of your applications, Bauhaus uses the 6 general accepted migration scenarios. In choosing these migration scenarios, technical possibilities, costs, migration time, legislation and business value are weighed against each other.

Based on all the results, Bauhaus provides you with a migration roadmap that allows you, together with Bauhaus, to begin your targeted journey to the Cloud.

# Your progress towards Cloud

All results around the Application Cloud Readiness Assessment will be made available to you digitally. With the Application Cloud Readiness Assessment dashboard, you can immediately understand how your application landscape can be migrated to the Cloud.

## Insightful progress

Bauhaus also offers you the opportunity to easily update the results of the Application Cloud Ready Assessment periodically. This will help you understand the progress of your Cloud migration and where to adjust.

# Approach

Bauhaus uses a fixed approach to conduct the Application Cloud Readiness Assessment. The lead time and investment depends on the size of the application landscape and number of applications to be examined.

- Inventory application landscape and scope;
- Kickoff with product owners, architects and application managers;
- Implementation of online assessment and guidance from the Bauhaus team;
- Draw up highlevel migration roadmap;
- Align migration roadmap with key stakeholders within the organization;
- Deliver online Application Cloud Readiness dashboard.

# THINK FORWARD

## MOVE FORWARD

- ✓ Experts on IT and change
- ✓ Use of proven methodologies
- ✓ With a smile

# Why Bauhaus

Bauhaus strives for successful digital transformations in organizations. Bauhaus focuses on strategy and implementation of digital transformation in which we put your customers first.

Bauhaus has a wide range of knowledge and experience: from experience in the Board room to knowledge of successful implementations. Bauhaus takes all this knowledge and experience with her advice to the client. This not only allows Bauhaus to support you in drawing up strategies and plans, but also provides good implementations, communication and stakeholder management.

# Our capabilities

- ✓ We combine vision and strategy with execution force.
- ✓ Our people know about IT and change management.
- ✓ We believe in an integrated approach and look at the coherence between purpose, human, process and technology.
- ✓ We do this in a transparent manner and in close cooperation with you
