# How Secure is Your IT Environment?

Insight

Quickly enhance your security capabilities with an Azure Sentinel JumpStart from Insight.

Your security posture is only as good as the view you have and the actions you take.

The proliferation of platforms, data, users and mobility is creating new challenges for security teams. Visibility and manageability are hard to attain, let alone staying on top of endless alerts and tool updates. **Azure Sentinel**™, the Microsoft® cloud-based Security Information and Event Management System (SIEM), was created to provide a whole new level of control and visibility across the entire IT security environment.

Azure Sentinel lets you combine and analyze security data from all your users, endpoints and infrastructure to make threat protection smarter and faster. An Azure Sentinel JumpStart from Insight will give you an understanding of the solution and a deployed instance in your environment.

Collect
Security data across your enterprise

Azure Sentinel
Cloud-native SIEM+SOAR

Respond
Rapidly and automate protection

Detect
Threats with vast threat intelligence

Investigate
Critical incidents guided by AI

What is a JumpStart?

Insight JumpStarts are on-site, expert-led workshops that combine training and implementation. Centered around best practices for cloud and security, JumpStarts familiarize your team with new technology and provide you with a working environment you can begin using right away.

How does the JumpStart work?

Our Azure Sentinel JumpStart is a two-part engagement.

Assessment and setup

- Our Microsoft technical experts identify data sources for your Azure Sentinel service.
- We deploy Azure Sentinel and create a log analytics workspace to analyze your data.
- We connect up to three existing Microsoft data sources, such as Advanced Threat Protection, Office 365® and Cloud App Security, into your Azure Sentinel SIEM.

On-site workshop

- Our Microsoft experts educate your organization on the features and functionality of Microsoft security services and Azure Sentinel.
- Through whiteboarding sessions, we review the Azure Sentinel build and the strategies and best practices we leveraged for the design.
- We review data sources and flows into Azure Sentinel, and provide training on how to monitor and visualize this activity.
- Together, we discuss your long-term strategy for a holistic security practice using Azure Sentinel and various data sources.

The result

Your team will leave the JumpStart with foundational knowledge of Microsoft security solutions, an understanding of threat hunting and detection with Azure Sentinel, and a functional SIEM ingesting Microsoft telemetry.
