

Move your workload to the cloud in days or weeks, not months

The decision to move your IT workload into the cloud is clear – now you need to decide the best approach to ensure the transition goes without a hitch. There are so many issues and you want to reduce the risk and uncertainty to ensure it happens in the shortest possible timeframe.

Here are three approaches to consider...

1 Do it yourself

How much time do you have? It could take many months and the risks are high if the team lacks the experience and mistakes are made. There could be security breaches, poor workload performance and the negative impact on the business widespread.

3 Use a pre-configured environment

A pre-configured environment sits within Microsoft™ Azure where all the configuration, risk and security issues have already been solved. You can move your workload within days, weeks or a few months using the CNI Production Ready Cloud Platform.

2

Engage an expert consultant that has the experience

How much time and money do you have? They will help you do it right and avoid the pitfalls. However, it will still take months and you will need the right budget.

3

The smartest, quickest route to the cloud: CNI Production Ready Cloud Platform

How much time and experience does your team have? If they are new to Azure, it takes time to understand the options and – if they are incorrectly addressed – it introduces too much risk. Lack of knowledge in these areas can significantly reduce the value that Azure can add.

You need to consider:

Networking

Security

**Design
architecture**

**Ongoing
management**

The CNI Production Ready Cloud Platform addresses all these elements.

5 key benefits

The CNI Production Ready Cloud Platform is the gift that keeps on giving. It provides the guard rails that IT teams can follow to deploy future, additional workloads to Azure rapidly and with full confidence the framework will ensure the right outcome.

01 Design framework

- Guidelines for all future Azure deployments
- Ensure scalability, security, cost savings and high availability

02 Security and compliance

- Protect administrative access
- Implement standards and compliance policies for all future deployments
- Report non-compliance in real time
- Enforce policies such as Password Complexity

03 Governance

- Enshrine company policies, procedures and controls
- Detailed reporting to avoid “bill shock”
- Ensure access from known trusted locations
- Adhere to encryption and data sovereignty policies

04 Ongoing management

- Leverage Azure DevOps capabilities
- Simplify Portal Administration
- Leverage Azure automation engine
- Consistent backup and recovery
- Automated security management

05 Availability

- Built in disaster recovery
- Automatically and seamlessly switch to a highly reliable backup
- Applications remain available during an IT interruption, limiting downtime
- Peace of mind knowing business-critical applications are available if disaster strikes

Move your workload to Azure with the CNI Production Ready Cloud Platform and feel the peace of mind of **knowing you got it right – and got it done in record time.**

Contact us today to find out more about the smartest, quickest way to prepare for moving your workload into the cloud.
