PORTAL ASSESSMENT

A solution for the ceased support of
Adxstudio Portals Version 7.

What does that mean?

Organizations are under pressure to quickly and carefully consider the future of their on-premises portal applications. What option are available to your organization now and which will maximize the return on their portal investment while providing for business continuity, ongoing support, and future functional enhancements?

Adoxio is aware of the challenge and is now offering a new Portal Assessment service to assist customers in making informed decisions on their path forward.

Adoxio inventories the functionality, features, and architectural details of your portal solution, categorizing each as a configuration, customization, or integration. We will then prepare an assessment of how each feature risk impact. With this information, combined with your input regarding future plans for your portal, we will recommend a road-map for your best path forward, along with a no-obligation budgetary estimate for engaging Adoxio to implement our recommendations.
