

## OPENTEXT CONTENT SERVER PRODUCTS OVERVIEW

Synergy works to solve the needs of globally distributed enterprise-sized businesses. Products available include:

### Replicator

**Replicator** was developed over 10 years ago to address the difficulties of providing rapid access to content in a geographically dispersed workforce. As the **Replicator** product evolved it has addressed many other business challenges. It has become the ideal tool for migrating or consolidating data from one Content Server instance to another. It can be used to split an existing instance into multiple systems. It can also be used to consolidate complete or partial instances into a single instance. It is used for DR solutions. Finally, **Replicator** can be used to perform upgrades to Content Server, which can be especially beneficial when moving to new databases, hardware environments and versions of Content Server.

### Bulk Loader/Bulk Exporter

**Bulk Loader** loads documents, attributes and metadata from all types of applications, storage areas and legacy systems. Flexible loading capabilities allows for unattended loading, intelligent folder structure creation and the ability to define complex attributes. **Bulk Loader**, along with its companion product **Bulk Exporter**, allows you to insert and update all your metadata, including Categories and Attributes, Records Management and Physical Objects. Both products install as Content Server modules and do not require additional hardware.

### Workflow

Content Server workflow continues to be widely popular with our customers as they see excellent return on investment with their projects. As capable as workflow is, there is still a need for additional capability such as enhanced email capability, advanced forms functionality and the ability to escalate steps that are late. To meet these needs and other advanced requirements Synergy developed Workflow Steps, Workflow Escalation and Workflow Map Printer several years ago. As more and more organizations use these tools and provide feedback the functionality continues to grow to the point where they are now a standard requirement for organizations that implement workflow.

### Content Server Modules

#### ■ Document Management

- Replicator
- Centera Storage Connector
- Bulk Loader
- Content Mover
- SendLink
- Bulk Exporter
- Live-Mail

#### ■ Workflow

- Workflow Steps
- Live-Mail
- Workflow Map Printer
- Workflow Escalation
- In Box Proxy

#### ■ Security

- Enhanced Password
- Extranet Secure

#### ■ Migration

- Bulk Exporter
- Content Mover

#### ■ Other Popular Modules

- Auto Numbering
- Soft Documents
