Organizations looking to automate and speed their software delivery process can leverage the integrated experience of Azure DevOps to achieve their business goals and delivery vision. DevOps is a practice that unifies people, process, and technology across development and IT in five core practices: planning and tracking, development, build and test, delivery, and monitoring and operations.

Azure DevOps can be leveraged for internal software deliverables, external delivery for custom projects or software project, and even IT professional looking to move from point-and-click administration towards Infrastructure as Code. In order to get started quickly and efficiently, Agile IT developers will work with your software developers and/or IT professionals to educate on how and where Azure DevOps can be utilized within their business. This can include starting within a new project with zero code to complex solutions that may already have a DevOps atmosphere and process.

Our Process

Recognize

Identify challenges and solutions together

Define

Declare scope, expectations, and success metrics

Analyze

Create, review and refine implementation plan with client

Improve

Deploy proof of concept or pilot program to validate implementation plan

Control

Migrate to the new cloud servers

Recognize

Train, secure, support. . .
SUCCEED!

Agile IT is widely recognized as one of the leading cloud migration and solution providers. We hold more than 15 Microsoft Partner Competencies, including Data Center, Cloud Platform, Identity and Access; recognizing our high levels of technical expertise and customer satisfaction.

Agile IT is a top tier member of the prestigious Microsoft SMB Champions Club, Azure Circle Partner, and sits among the top 0.5% of the online services channel. And we are proud to be one of only a handful of companies worldwide who have been named as Microsoft Cloud Partner of the Year for four consecutive years.

Our Solutions

AgileSecurity

Protect your organization, users and data with EM+S security assessment, reviews, audits, reporting, evidence, training and updates.
