

Power BI in a Day

Power BI in a Day is a focused workshop that Netrix provides to its clients to educate professionals on how they can use Power BI in their businesses. First, you will learn how to query and pull in data. Then organize the results into a data model with relationships and calculations. Finally, you will learn the best way to visualize your data through a variety of charts, graphs, maps and gauges that are provided. This class exclusively uses the Power BI Desktop application to create solutions that are deployed to the Power BI Service and are then visible from any devices.

Why you should attend?

If you want to know how Power BI and Data Visualization can benefit your organization this workshop is right for you. During the workshop, we will work on each of the following:

DASHBOARDS

Learn how to author reports using Power BI Desktop and create operational dashboards with the Power BI service.

CREATE AND PUBLISH

Learn how to create visualizations, publish the Power BI Desktop model to the web and share dashboards.

WORK ON REAL DATA

You can bring your company's dataset and our team will help you create dashboards and visualizations of your data.

If you'd rather not bring your company's data, no problem! We have a sample dataset from a fictional company that you can use to practice your skills. The dataset is a good sample that will help you understand what Power BI and Data Visualization can do.

We believe that the best way to experience Power BI is with your own data. Our workshop enables you to bring your own data.

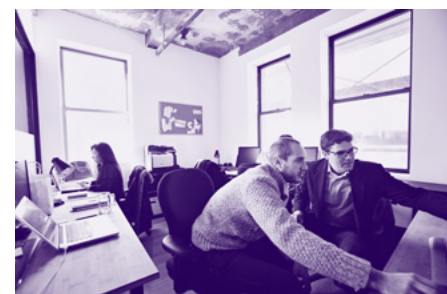

LARS KEMMANN
MANAGER

COURSE OUTLINE

This workshop will get you started on your path to understanding how Power BI can improve your company's data visualization. The workshop will cover the following:

- Overview of Power BI & Data Visualization
- Understanding your way around the Power BI Desktop
- Power BI Service
- Lunch (provided)
- Creating your first dashboard
- Q&A

Funding is available for this workshop through calendar year 2019 to any Netrix Client. See your Account Executive for information on scheduling your company's details.

The goal is to provide you with a solid foundational knowledge of Power BI and a working dashboard of your own data.
