

Marquam has developed the Power BI FastStart program to support organizations that want to leverage their investments in data. This program is based upon the successful deployment of Microsoft's Power BI. This tool can assist in the efforts to create a data driven culture by providing a powerful data exploratory capability at a low cost of entry. However, the tool does not replace the need to have an Enterprise BI and BI Self-Service roadmap. The Power BI FastStart program builds the foundation of an Enterprise BI strategy and at the same time delivers immediate value to the end user community. It has three major components:

**ROADMAP**

This outlines tasks and milestones to successfully roll out Power BI. It includes topics such as data platform architecture, data source management, user adoption and report development.

**DEPLOYMENT**

We support multiple delivery approaches including: Enterprise led BI and Dashboards, Power user data exploration and IT managed self-service BI. Marquam will develop a set of best practices for deploying Power BI to meet delivery approach objectives and roadmap logistics.

**REPORT +
DASHBOARD**

Dashboards are best when they are widely distributed. Power BI makes sharing a dashboard with colleagues quick, easy and cost effective.

Contact Marquam to find out if your Power BI FastStart is eligible for Microsoft funding.
