Azure Maturity Assessment

Helping our customers to get success when going to Azure Public Cloud

Most of the Cloud projects fail because, they are focused only on a technical part, and do not take into account several pillars assuring its success such as the governance, the implication of businesses, the good level of security, the good understanding of production teams ...

Cloud Maturity assessment aims at estimating the maturity of your organization (strengths and weaknesses), and building the roadmap which will allow you to make your Cloud journey a success.

Our mission

- Define the appropriate engagement level on the strategic axes of a migration to the Cloud (duration, complexity)
- Help you identify your maturity level to go to the Cloud, based on 6 pillars (business, people, operation, platform, process, security)
- Propose the first steps of a cost / TCO estimation process
- Estimate a "high level" schedule and the costs of your migration

Get the vision

- Your strategy is clear (Cloud model, ramp-up)
- The implementation is known (roadmap, migration path, landing zone)

Empower people

- Cloud Governance (CCOE) helps to involve key people
- Businesses are strengthened (service catalog, use cases..)
- IT people are motivated (new jobs, training, Cloud operational model)

- Magic Quadrant Gartner Leader since 2013
- Microsoft Azure Expert Managed Service Provider
- DevOps Experts
- Expert design and build, always with the management in mind
- Cloud Ready or Cloud Native : customised services

Speed up your ROI

- Your business case is under control
- The time you gain by getting to the point is a competitive advantage
