Sycor Datacenter Transformation

Get your Datacenter ready for the future with the Cloud Adoption Framework for Azure!

Based on the Cloud Adoption Framework for Microsoft Azure Sycor has adapted this approach for medium-sized enterprises. Using best practices and documentation to train your IT-department being cloud enthusiasts. Together, we will develop a strategy for a cloud-IT-foodprint that matches your business objectives and motivations to work with Microsoft Azure.

In our Workshop engagement we will deliver three workshop days for topics of strategy and planning, governance and management and adoption and delivery, of your future IT-workloads. As a result of these three days, the MVP-workload* of the customers will be deployed in Azure with the ability of three more delivery-waves**.

Based on your cloud adoption plan and following the best practices out of the Microsoft world we will develop together the landing zone designs for your Azure infrastructure combined with future IT-operations and a strong focus on monitoring and reporting the right KPI. **See here an agenda for our engagement of the Sycor Datacenter Transformation:**
