About Wintellisys

Microsoft Azure Cloud Migrations flow through our veins. It's all we do apart from providing Innovative solutions.

An Independent Software Vendor (ISV) who believes in solving real-world IT Problems by designing innovative IT solutions.

Our Clients

Wintellisys has been the go-to Microsoft Gold Partner for Office 365, Exchange and Azure Cloud Migrations. Here are some of the clients we've helped.

Wintellisys helps TruGreen Deploying WVD for more than 3000 users successfully.

"The people at Wintellisys helped us deploy Azure Windows Virtual Desktop technology successfully. They really wanted to work with us and get us up running."

– TruGreen, Senior Engineer

Our Products

WVD Manager

An innovative solution designed to manage multiple WVD deployments using single console. WVD Manager offers other capabilities which are highlighted as part of this presentation.

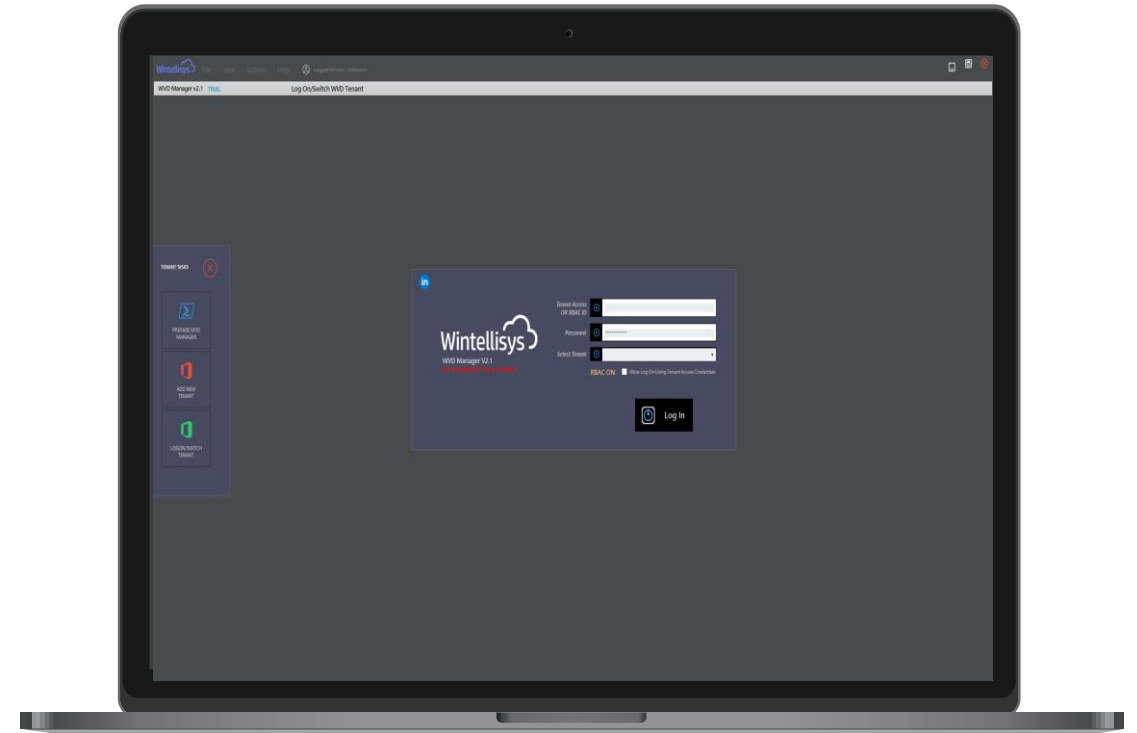

IT Health & Risk Profiler

An innovative solution designed to perform health & risk assessment of multiple technologies such as Microsoft Active Directory, Azure, Office 365, Microsoft DHCP, SharePoint and WVD Assessments.

Why WVD ?

- ❑ WVD is Microsoft's virtualization service and delivers compelling value
- ❑ WVD allows users to connect from any device of their choice
- ❑ Lower labor cost because compute and storage move to cloud
- ❑ WVD management service included with the licenses you already own
- ❑ Sophisticated security services easily configured through Azure AD (e.g. MFA, CA, etc.)
- ❑ Containerized User Profiles (FSLogix) with fast VHD load times
- ❑ Multimedia redirection capability, high-performance, low latency audio & video calling

Our Approach

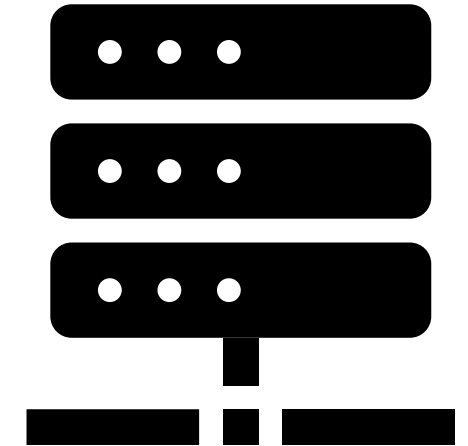

Gold
Microsoft Partner

- Azure Environment Assessment
- Desktop Application Assessment
- Identity and Access Management
- Azure Networking Assessment
- Security & Compliance Assessment
- Licensing and Entitlements
- Image and Patch Management

Wintellisys Unique Approach

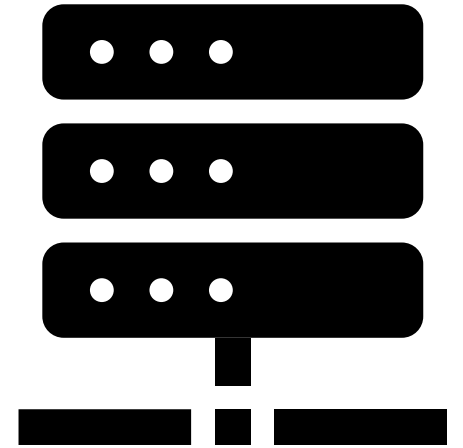

- ✓ **Azure Environment Assessment** - Evaluate the current Azure footprint to drive efficiency and reuse services. For Customers with existing Azure deployments, the assessment phase can help identify resources that can be repurposed or utilized and reduce the number of new Azure services required for deploying WVD.
- ✓ **Desktop Application Assessment** - Conduct an Application Landscape assessment. Application assessments provide the current performance and usage details like OS, Application Compatibility, CPU, memory etc., and aids in VM sizing recommendations by classifying users into Personas (task workers, power users, knowledge worker etc.) and related Azure costs
- ✓ **Identity and Access Management** - WVD Service in Azure requires Authentication and Session hosts to be domain joined using Windows Active Directory (AD). This can be done either from the on-premise environment or using Azure AD Domain Services (AAD-DS).
- ✓ **Azure Networking Assessment** - As networking plays a crucial role in any cloud service deployment, designing a robust network architecture to satisfy all the KPI requirements is important. This should be part of your services in the design.

End to End
Solution
Delivery

Wintellisys Unique Approach

- ✓ **Security & Compliance Assessment** - Customers need to strengthen the security and access mechanisms of their WVD deployments as they are governed by corporate policies (compliance, regulations etc.). This is a crucial step in the WVD implementation.
- ✓ **Licensing and Entitlements** - Access Windows 10 Enterprise and Windows 7 Enterprise desktops and apps at no additional cost if you have an eligible Windows or Microsoft 365 license. For accessing Windows Server based deployments, you need to have an RDS CAL with SA.
- ✓ **Image and Patch Management** - Verify if Customer has any existing management solutions such as SCCM that they would like to utilize for Image and Patch management OR azure native solutions like [update-management](#) and [image-builder-overview](#) can be leveraged.
