

Civility, safety & interaction online: Mexico

In an effort to promote safer, healthier, and more respectful online interactions among all people since 2016, Microsoft has been surveying teens and adults around the world about the state of digital civility. This latest survey marks the fifth straight year of that research, where we again asked respondents about their exposure to 21 different online risks across four categories: behavioral, sexual, reputation, and personal/intrusive. In total, over 16,000 respondents in 32 geographies participated (501 in Mexico), equally divided between teens and adults. The research was completed in April and May 2020. Read on for a summary of the latest results, some of which may surprise you.

Digital Civility held steady up 1 point to 76

Deterioration of DCI driven by adults

Teens 72% | -2
Adults 80% | +4

Lower DCI score equals better online civility

Extreme pain dropped significantly

Unbearable & Severe Pain

Best DCI scores in the world
