

Civility, safety & interaction online: United States

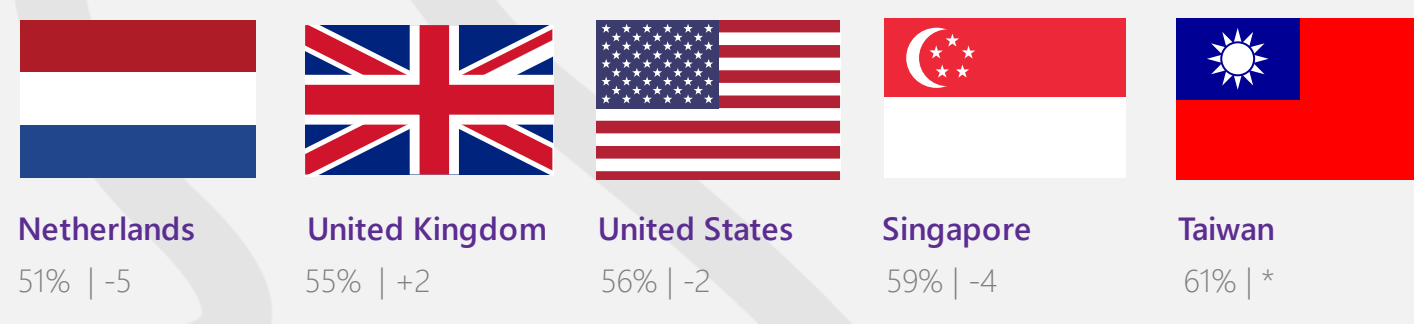

In an effort to promote safer, healthier, and more respectful online interactions among all people since 2016, Microsoft has been surveying teens and adults around the world about the state of digital civility. This latest survey marks the fifth straight year of that research, where we again asked respondents about their exposure to 21 different online risks across four categories: behavioral, sexual, reputation, and personal/intrusive. In total, over 16,000 respondents in 32 geographies participated (502 in United States), equally divided between teens and adults. The research was completed in April and May 2020. Read on for a summary of the latest results, some of which may surprise you.

Digital Civility improved by 4 points to 56

Best DCI scores in the world

Netherlands, USA, and Singapore showed significant YoY improvement in DCI
* Taiwan added in 2020

Biggest improvements around the globe

Biggest improvements in DCI were primarily among geographies ranked lower on online civility

Rating overall online civility

66% took at least one Digital Civility Challenge action
