

Civility, safety & interaction online: France

In an effort to promote safer, healthier, and more respectful online interactions among all people since 2016, Microsoft has been surveying teens and adults around the world about the state of digital civility. This latest survey marks the fifth straight year of that research, where we again asked respondents about their exposure to 21 different online risks across four categories: behavioral, sexual, reputation, and personal/intrusive. In total, over 16,000 respondents in 32 geographies participated (501 in France), equally divided between teens and adults. The research was completed in April and May 2020. Read on for a summary of the latest results, some of which may surprise you.

Digital Civility increased 1 point to 63

Rating overall online civility

42% took at least one Digital Civility Challenge action

"I stood up for myself"
#1 most common action

"I paused before replying to someone I disagreed with"
#2 most common action
