

Beta Version

The Beta version is compatible with all versions of Microsoft Power Point released over the last decade, both 32 and 64 bit.

Installation

Checkpoint Software has integrated a Sign Certificate distributed by SECTIGO which guarantees the property of the software. Since the software is new, Windows SmartScreen will appear. For installing select "more info." option and click to "Run anyway".

Trial version limitations

When you install CheckPoint Software, it works as a trial version. You can use it as long as you like but it will persistently display an activation reminder after a number of uses in any PowerPoint session. You can dismiss the reminder by clicking on a certain button.

Corporate licensing

The price for corporate and personal licenses is the same, i.e. US\$1.25 per user per month. There are no volume or reseller discounts. You can buy a corporate license online for any number of users, paying with any major card or via PayPal. Once the payment is made, the license keys will be generated and you will receive the confirmation purchase in the email for your records. For a corporate invoice contact us.

If you are interested in an unlimited site license, please contact us.

Information security

Checkpoint Software never sends any data from any PowerPoint presentations over the Internet. All processing is done locally. The only communication that the add-in does is to validate its license key with our server as well as to periodically check for any version updates. CheckPoint Software uses HTTPS connection so that this communication can be audited if required.

System requirements

Checkpoint Software works on Windows (including Windows 10) and all desktop versions of Microsoft PowerPoint starting from PowerPoint 2007, both 32 and 64 bit, including any desktop version delivered as part of Microsoft 365. The tool requires the following system components. Most modern computers with Microsoft Office installed will have them, but if anything is missing or requires updating, you can download and install it from the Microsoft website:

- Microsoft .NET Framework 4.5
- Visual Studio 2010 Tools for Office Runtime (version 10.0.40820 or later)

Checkpoint Software does not run on Apple Mac, Open Office or in PowerPoint Online.
