# Consistent, compliant and quick way to create and manage projects

Based in Cambridge, UK, Kymab are making better medicines by continually improving the best antibody technologies. Their vision is to be a global biopharmaceutical company, an inspirational home of molecular immunology driving the development of novel drug substances.

Due to rapid growth they were looking for bespoke SharePoint site creation that whilst adhering to business and regulatory compliance requirements also supported best practice governance without the accompanying high IT support costs.

Casper365 deployment cloud platform was used by Business Cloud Integration and they developed a specific set of sites for deployment by different teams with each project rolling up into a central PMO dashboard. The user management module enabled delegation of permissions; allowing users to create only the appropriate new sites for their teams.

Kymab are now enjoying a self-service, modern workplace making their teams more productive with minimum reliance on IT.

At-a-glance:

Customer: Kymab

Country: UK, Cambridge

Industry: Biopharmaceutical, molecular immunology

Customer challenges

With a rapidly growing business, Kymab needed to find a consistent, compliant and quick way to create and manage projects in SharePoint Online.

Having moved to the cloud and already having SharePoint on premise the business knew too well the IT overhead needed to support SharePoint. Specifically, Kymab needed to find a way to empower their users with a modern document management system without the overhead of a specialist IT team to keep up with the business demand for the platform features.

Partner Solution

Kymab selected Business Cloud Integration and their Casper365 platform due to the diversity and development skills in the team and experience in the industry. As a specialist SharePoint Online

Working together with Kymab, Business Cloud Integration developed a specific set of sites for deployment by different teams with each project rolling up into a central PMO dashboard. The user management module enabled delegation of permissions; allowing users to create only the appropriate new sites for their teams.

Customer Benefits

Kymab recognised early adoption of the new SharePoint Deployment Service would rapidly deliver benefits and are enjoying a self-service, modern workplace with users able to progress work efficiently and be more productive with minimal reliance on IT.

They are seeing greater adoption of the SharePoint Platform and continue to design and refine their sites to better use the collaboration toolset.

"Kymab are enjoying a self-service, modern workplace with users able to progress work efficiently and be more productive with minimal reliance on IT."
