

# Civility, safety & interaction online: Peru

In an effort to promote safer, healthier, and more respectful online interactions among all people since 2016, Microsoft has been surveying teens and adults around the world about the state of digital civility. This latest survey marks the fifth straight year of that research, where we again asked respondents about their exposure to 21 different online risks across four categories: behavioral, sexual, reputation, and personal/intrusive. In total, over 16,000 respondents in 32 geographies participated (505 in Peru), equally divided between teens and adults. The research was completed in April and May 2020. Read on for a summary of the latest results, some of which may surprise you.

## Digital Civility improved by 7 points to 74

### Rating overall online civility

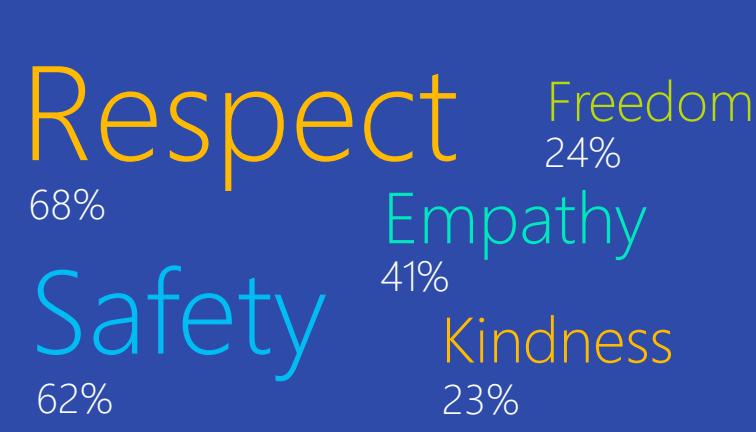

## Online civility rated slightly less negatively in 2020

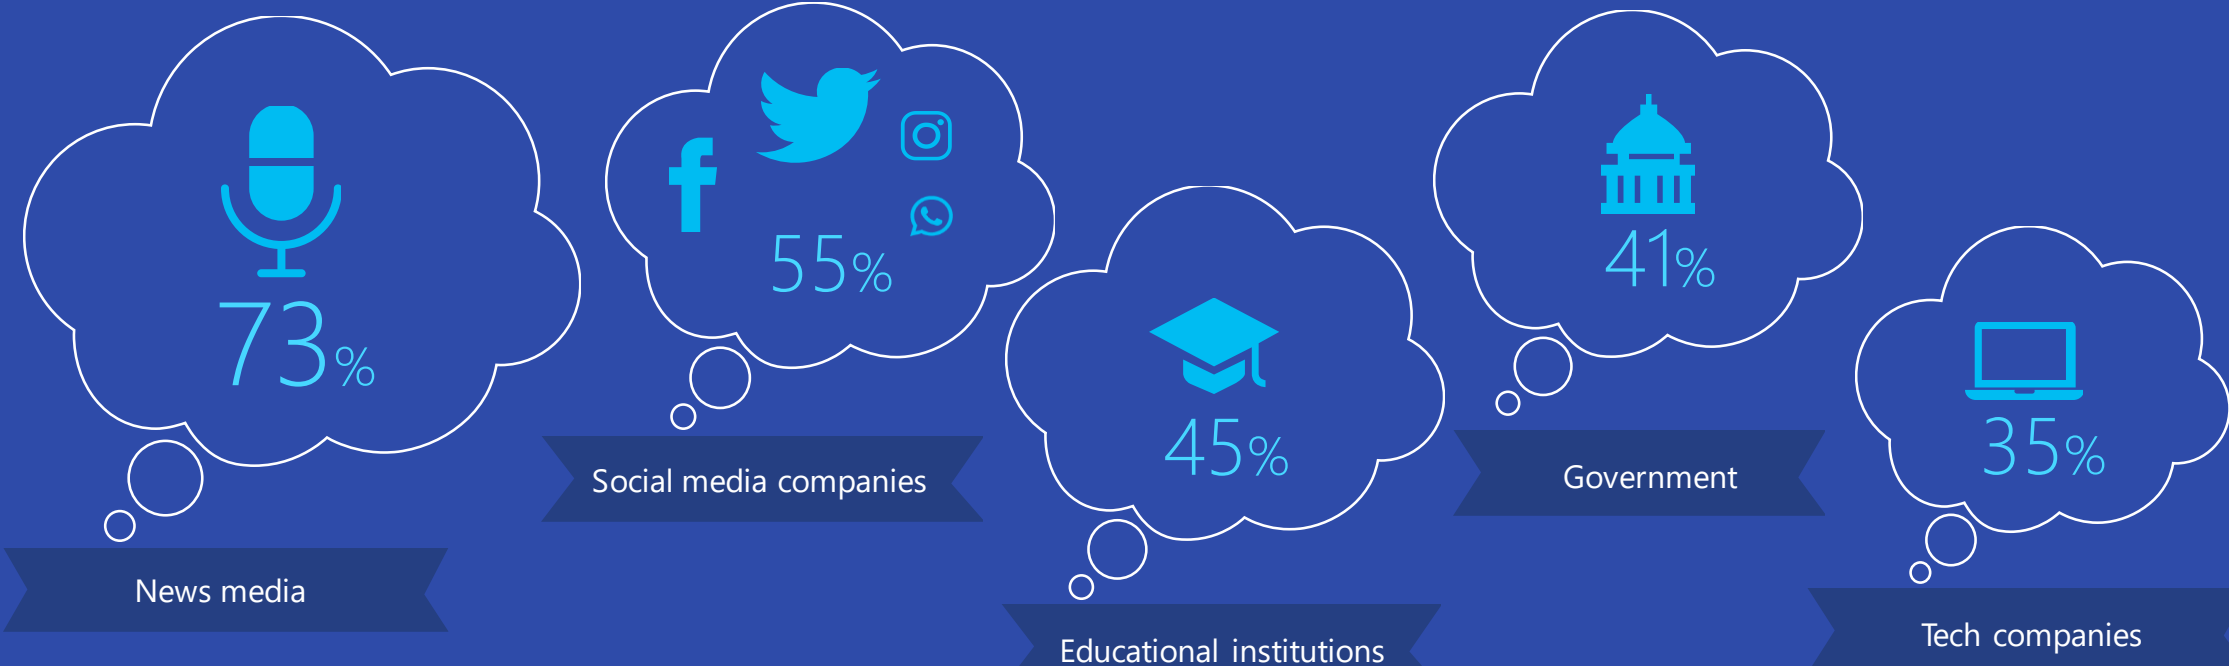

### How good or bad is online civility regarding\*...
