

Empowering sustainable productivity

Actionable insights for making better, sustainable decisions

For industry manufacturers, who seek to digitalize their factories to increase productivity, Elisa Smart Factory offers actionable insights that help manufacturers reduce unplanned downtime and increase quality and yield.

What is Elisa Smart Factory

A software solution that connects to machine, enterprise and process data, collects and turns it into actionable insights for factory management and operational teams. It shows process inefficiencies in real time, finds out why they are happening – and how to avoid them. These insights empower production optimization, resulting in increased machine uptime, production quality and yield.

Why Elisa Smart Factory

- Intuitive, 3D overview of factory processes in one view
- Provides real-time visibility to all factory processes
- Uncovers insights by combining data from all available sources
- Empowers continuous process improvements based on data-driven insights

Improves productivity

- Increases yield by improving quality and optimizing asset performance and utilization

Increase productivity
5-8%

Saves costs

- Reduces expensive, unplanned machine downtime and waste

Reduce costs
4-9%

Enhances customer trust

- Reduces quality deviations and stabilizes production quality

Improves quality
8-13%

“By using Elisa Smart Factory, we are now able to see exactly what is happening in the factory and what we can expect. This helps us to optimize our material flows, which we couldn’t do before.”

Dr. Rupert Deger, Founding Partner, e.GO Mobile AG
