

# Put Your M365 Information Security on Autopilot

Cognni is an Information Intelligence platform that makes sense of overwhelming volumes of shared information. The platform provides **new ways of understanding your important information** to make automating your InfoSec feasible and easy.

## How Cognni Automates Protection:

**Autonomous Mapping** – more than RegEx. The platform autonomously maps the files containing your important information, so that you know what you need to protect.

**Risk Detection – clears the noise.** Intelligently detecting risks to your important information, Cognni autonomously clears the noise, saving you significant time.

**Intelligent Response – take the right action.** Cognni's AI works for you, providing you with actionable insights ensuring you are in control of your important information.

## Key Benefits of Information Intelligence

- 1 Works out of the box**  
5 minutes to connect with no user involvement
- 2 Finds your important information**  
Visibility with autonomous information mapping
- 3 Clears the noise with context**  
Keeps up with huge volumes of important information by resolving false positives
- 4 Know your risk**  
Uses contextual incident detection to make sense of how your important information is used, by whom, as well as when and why it is at risk
- 5 Simplifies use of MCAS & MIP**  
Automates widespread MIP labeling, and automates MCAS alerts and filtering.

**Stay in control of your important information.**
