

MICROSOFT DYNAMICS 365 BUSINESS CENTRAL

Administration App

Additional set of functionalities for handling entities

Dynamics 365 Business Central is improved with additional functionalities for handling entities:

- Customer, Vendor and Item Classification
- Managing Contacts

Functionalities and detailed description

FEATURE	DESCRIPTION
Customer, Vendor and Item Classifications	Customer/Vendor/Item Classifications functionality enables to use classifications on Customer Card, Vendor Card, Contact Card, Item Card and Service Item Card. Classification can be later used for analysis and reporting
Managing Contacts	Managing Contacts functionality enables to create Customer and Vendor with the same No. as it is on Contact. When creating Vendor from Contact you can use Conf. Template. Functionality also includes a new report for massive creating Customers/Vendors from Contacts based on Customer or Vendor Template No. in Contact table.
Mandatory fields	Mandatory fields functionality enables to set fields on different cards as mandatory when creating new.
